

# Cybersecurity Services for Directors of Legal Departments

## OVERVIEW

Legal Departments face intricate challenges that demand expert and strategic management. The dynamic and ever-changing legislation presents a constant challenge to stay updated and ensure the company's compliance with regulations. The globalization of businesses adds an additional layer of complexity, involving the need to understand and comply with various international regulations. Moreover, the effective management of legal risks with potential lawsuits or contractual disputes is crucial to safeguard the organization's interests. The rapid evolution of technology and the growing threat of cyberattacks also require constant attention to ensure information security and data protection. In this context, the legal advisory area must balance proactivity in identifying and mitigating risks with the need to facilitate the company's business operations, and cybersecurity plays a fundamental role in achieving this balance.

## SOLUTIONS

Zerolynx deeply understands the needs of Legal Departments and strive to meet them comprehensively by designing, implementing, maintaining, and operating comprehensive security plans based on the six areas of NIST (Govern, Identify, Protect, Detect, Respond, and Recover). Among these functions, and considering the competencies encompassed by the Legal Advisory role, we focus on 3 key functions:

- **Govern:** We align the IT activities of your organization with its business objectives, manage risks, and comply with laws, regulations, and standards such as DORA, National Security Schemes, Data Protection Acts/GDPR, Private Security Law 5/2014, NIS2, ISO 27001, ISO 22301, or CIS Controls.
- **Identify:** We detect leakages, exposed data, malicious actors, breaches, and other threats to prevent potential new actions that could lead to a cyber incident. Our reports are signed as private investigators in compliance with Spanish Private Security Law 5/2014, of April 4, and Royal Decree 2364/1994.
- **Respond:** Using forensic techniques, we assist you in containing potential incidents such as ransomware or fake invoice scams and investigate their origin to prevent new breaches. Our work is endorsed by qualified engineers, complying with the Spanish Act on Civil Procedure (1/2000) Article 340, allowing it to be brought to court.

## KEY FIGURES

- **68% of legal teams** consider it very **difficult to comply with all the regulatory requirements** imposed on companies.
- Last year, a total of **335,995 cybercrimes relating to fraud** were reported in Spain.
- **25% of the companies** that suffered a cyber incident did not have their **ISMS certified**.

*"Zerolynx helped us recover from a cyber incident, identified the origin of the problem to provide a solution, audited our vulnerabilities, and prepared an action plan. We are very satisfied with their work."*

**Head of Legal Affairs at a major company in the Logistics Sector**
