

How to install Ground Anchor Model # 10D4-GA-0

The kit contains the following parts:

- 1 pc Ground Anchor (10D4-GA-1)
- 1 pc Extension Ring (10D4-GA-2)
- 1 pc Thread Protector Cup (mounted) (10D4-GA-3)
- 1 pc Rubber Washer RW-1

The **Ground Anchor** provides a solid and decorative Base for the Sentinel™ Candle in places where earth ground is available to place the memorial candle.

The **Extension Ring** raises the height of the Sentinel™ candle from the ground level an additional 1.5” to a total of approximately 5”. It provides protection during grass cutting or other ground maintenance.

When the Extension ring is used place it on the ground first with recessed edge facing up.

With the **Thread Protector Cup** covering the metal thread, fix the **Ground Anchor** firmly into the ground using a hammer or mallet if necessary. The **Ground Anchor** should be perpendicular to the ground. Once the **Ground Anchor** is properly installed remove the

Thread Protector Cup, align **Extension Ring**, and place the **Rubber Washer** on the threaded metal bolt.

Place assembled and illuminated (see below) Sentinel™ Candle on the bolt and turn until the Candle is firmly positioned.

Install batteries in the Candle (observe polarity marks in the battery chamber). Additionally you should place any memorial item into the Viewable Memorial Chamber and light the candle before placing it on the **Ground Anchor**.
