

How to install Mounting Stud Model # MSSS-L/T

The kit contains the following parts:

- 1 pc 7/16 x 20 Stud MSSS-1
- 1 pc Plastic Spacer (assembled with Stud) PS-2
- 1 pc Stainless Washer (assembled with Stud) MSSS-2
- 1 pc Rubber Washer RW-1
- 1 pc Security rope
- 1 pc Mounting Screw **Long** for Legacy candle
- 1 pc Mounting Screw **Short** for Tribute candle
- 1 pc Allen Wrench AL10

The mounting stud offers a tamper proof installation to hold the Sentinel® Legacy™ or Tribute™ candle on the monument base.

Drill ½” Diameter, 1.5” deep hole at the desired location on the monument base. Fasten **Stud** in hole with epoxy or similar material allowing **Stainless Washer** to rest on monument surface. **Stainless Washer** covers drilled hole.

Locate the **Rubber Washer** on the threaded metal bolt. Place the assembled and illuminated (see below) Sentinel® Candle on the threaded bolt and turn until the Candle is firmly positioned.

Thread the **Cable** through the hole in the **Stud** and secure the loop end with padlock (not supplied)

Install batteries in Sentinel® Candle (observe polarity marks in the battery chamber) and turn bottom cover fastener plastic nut until the candle lights. Align one of the locking holes on plastic nut with the **arrow** on Sentinel® Candle bottom cover. Insert the **correct size** screw into the small loop of Security rope then place screw into the hole that aligns with **arrow**. Tighten the screw with the furnished **Allen Wrench**. Do not over tight. Additionally you should place any memorial item into the Viewable Memorial Chamber before placing it on the holding anchor (Stud).

Place the Allen Wrench in a safe place. You will need it again when changing batteries.
