

THE TACTICAL BLANKET™

The Bullet Stops **HERE!**

Standard Cruiser Deployment

Begin by removing Tactical Blanket™ from the Softcase. Also remove the three Suction Cup Straps. Insertion of Extension Pole set is optional.

Stand blanket against side of vehicle. Fold in side mirror. Release two securing straps on blanket. Unfold blanket "accordian" style.

Position extended blanket to cover front & rear passenger compartments. Lean extended blanket against vehicle.

Place and affix the rear Suction Cup Strap to the trunk lid by pumping the piston approx. 8 times. Lift blanket and attach to diagonal Velcro strip on panel #1.

Place and affix the front Suction Cup Strap to the hood. Suction is good when you can no longer see the red stripe on the thumb piston.

Lift blanket and attach the strap to diagonal Velcro strip on panel #8.

Place and affix the center Suction Cup Strap to the roof directly above the center Velcro strip on panel #5.

Lift the center of the blanket up and away from you, towards the vehicle. Attach the Suction Cup Strap to the vertical Velcro strip on panel #5.

Make any necessary adjustments to the Suction cups or Velcro straps. Deployment is now complete. Blanket can be attached to either side of vehicle.
