

INFLATE

1. Unroll your camp bed and lay it flat on a clean surface with CORE logo face-up.
2. Open the Inflate valve located on the sidewall at the head of the bed to the "INFLATE" position and allow the camp bed to fill with air (fig. 1)
3. Allow camp bed to self-inflate for 2-3 minutes. Camp bed will reach ~80% fullness on its own. Once mostly inflated, close inflate valve to "MICRO-ADJUST" position (fig. 2).

4. To further inflate camp bed, locate the carry bag with included pump sack feature. Attach valve plug located at end of carry bag to inflate valve in the "MICRO-ADJUST" position (fig. 3).
5. Open free end of carry bag and hold 10-12" away from your mouth. Blow 1-2 breaths into bag (fig. 4), then quickly close bag and begin rolling it towards the camp bed, applying pressure to push air into the camp bed as you go (fig. 5).
6. Repeat steps 4 and 5 as needed until camp bed reaches preferred level of firmness. Once inflated fully, close valve.

TIP: If the camp bed feels too firm you can use the "Micro-Adjust" feature on the inflate valve to release small bursts of air from camp bed. To do this, open inflate valve to micro-adjust position and press down on the green trampoline for 1-2 seconds at a time until you find that *just right* level of comfort.

DEFLATE

1. Open Deflate valve located on the sidewall at the head of the bed (fig. 6). Starting at the foot of the camp bed (opposite of valves) begin tightly rolling and compressing the bed as you go, working your way to the top of the bed (fig. 7).

TIP: If rolling the camp bed is difficult you can first fold the bed in half and press down to push out a large amount of air.

2. Once completed, lay the camp bed flat and, once again, begin tightly rolling and compressing the bed. Once rolled up, securely close the Deflate valve and use included hook-and-loop straps to secure camp bed in rolled position. Put camp bed and pump sack into carry bag, roll the top and buckle closed.

MULTI-BED SLEEP SYSTEM

Connect multiple beds together for a larger sleep surface!

- Line up inflated camp beds side by side
- Locate included buckle straps
- Starting at head of bed – slide opened strap through corner loop of bed on left and then bed on right, then join ends of straps together to buckle closed
- Pull loose end of strap with CORE logo to tighten loop as needed.
