

 **Re-board®**

The world's leading sustainable
creative paperboard

An aerial photograph of a dense forest, likely in Sweden, showing a variety of green trees and a dirt road winding through the woods. The text is overlaid on the center of the image.

**From the forests of Sweden comes Re-board®
The original and uniquely strong and versatile rigid paperboard**

Norrköping, Sweden

Join the revolution

In Sweden, the home of the Re-board® Technology Mill, 70% of the surface is covered by forests. Sustainably managed this wonderful resource is growing at a net of 3-4% yearly.

Consumer perception of plastics and heavy materials have finally reached a tipping point. Years of campaigning have resulted in a widespread awareness of the strain that plastics and oil-based has put on the environment.

Last years, we've seen this translate into real demand for change, which brands rushed to meet. From McDonald's plastic straw ban to L'Oréal's paper shampoo bottle, plastic-free initiatives hit the mainstream.

Because of this surge in awareness, consumers were not only happy to pay a premium for these products, but actively looked for brands who could supply them. Sustainable brands now show the fastest growth rate amongst all - proof that this is the path forward.

We're proud to be a 100% paper-based company and to continue leading the sustainability revolution.

Re-board® cutting techniques

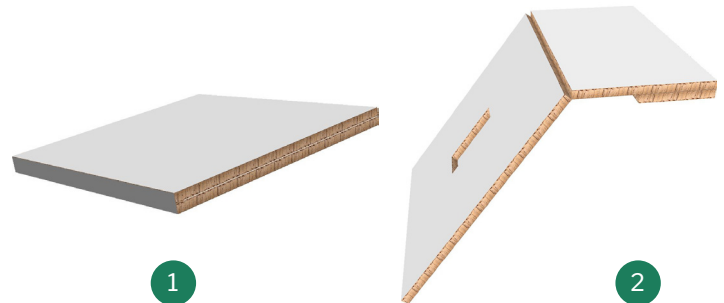

V-notch

1. V-notch cut 45 °C
2. V-notch fold 45 °C
3. V-notch fold 30 °C
4. V-notch fold 15 °C
5. Reverse V-notch cut 45 °C

Partial cut

1. Folding, to create a corner with liner.
(Example 16mm Re-board®) make a partial cut with 32 mm distance. Remove the core and fold the board.
2. Use the partial cut for foldings or cuts without cutting through the liner. -0,2 to -1mm from the cutting table top for best result.

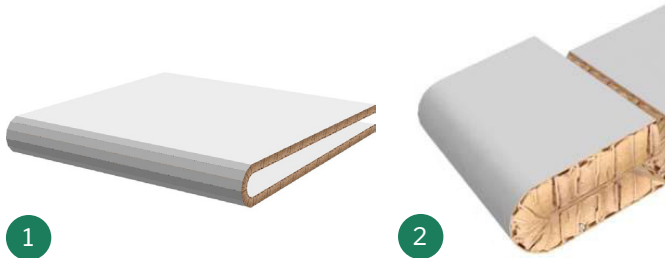

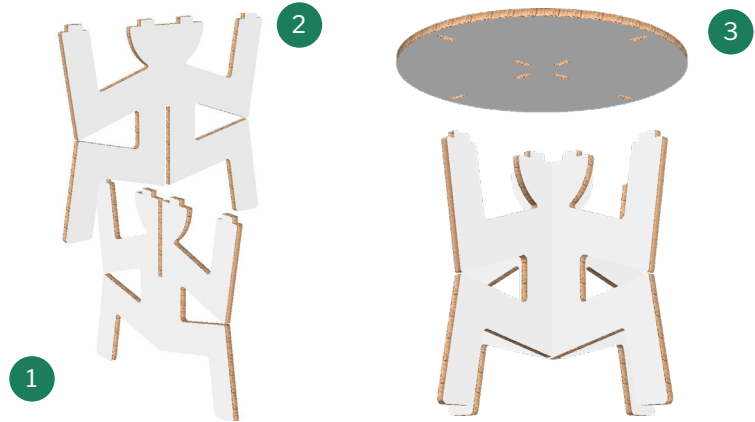

Locking

1. An easy way to lock two parts. Make one of the splits 16mm wide and the other 16.5 for best fitting. Meet the parts in the middle.

2. Standard on the tabs is 50mm wide with a 5° angle.

3. The tabletop is made with partial cuts to hide the holes that's combine the table.

Bending

1. The best way to bend Re-board® is to make multiple V-notch single folding cuts at the same direction.

2. Another way is to make partial cuts and remove the liner from the inside and then bend the material in the shape you want.

Re-board® Technology AB is a privately held company based in Norrköping, Sweden. The company holds patented technology for producing paperboard with a uniquely engineered fluted core. The main product Re-board® is a strong and rigid but very light-weight board that converts well for usage areas in printing, advertising and displays.
