HYDE INTRODUCES TIME-SAVING DUAL HEAD SPRAY TIP EXTENSION

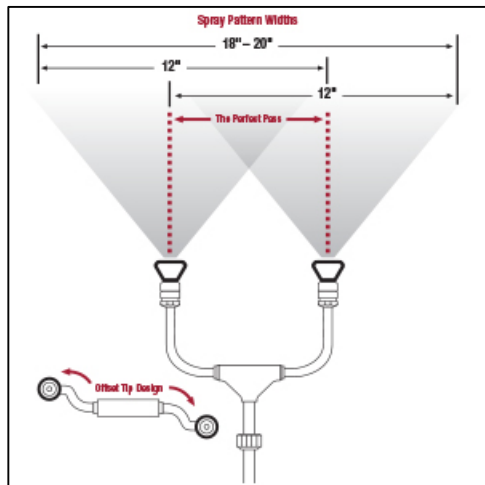

SOUTHBRIDGE, MA – Hyde Group has introduced a new dual-head airless spray tip extension that allows pros to paint twice as fast, with better coverage.

The HYDE® Dual Head Tip Extension (item #28760) was designed by an aerospace engineer using the highest quality aircraft aluminum to create a

lightweight, durable, easy-to-clean extension. Its primary benefits, however, are speed and quality.

Using two tips spaced 6 inches apart, the Dual Head Tip Extension creates a spray fan that's twice as wide as the fan from a spray gun or single-tip extension. Because the tips are offset, the second tip follows behind the first – creating a “perfect pass” with a feathered overlap. The result is greater speed and better first-coat coverage.

“When you see the Dual Head in action beside a single-tip extension, it’s apparent that it cuts painting time in half,” said Corey Talbot, vice president of marketing and product development for Hyde Group.

“But it achieves that even as it improves the finished paint job.”

The Hyde Group family of companies.

HYDE GROUP

54 Eastford Road
Southbridge, MA 01550
508.764.4344

When cutting in tight areas where a wide fan is not needed, either of the tips can be turned off, converting the Dual Head into a single-tip extension.

The Dual Head Tip Extension fits all “G” thread spray guns and is recommended for use with .47 GPM or larger pumps. It uses 5 and 6 series tips.

For more information about the HYDE® Dual Head Tip Extension, call your Hyde sales representative, or contact Hyde Tools customer relations at 1-800-872-4933.
