a_e = Width of cut
a_p = Cutting depth

a_e = 0.1 x D

Feed rate codes in bold are the preferred choice for the respective material group.

Oblique plunging and slot milling

For oblique plunging the feed rate (v_f = mm/min) should be reduced as illustrated.

In addition, chip evacuation is required for drilling depths in excess of 1 x D. This also applies to the transition to radial machining.

slot milling

a_p = cut. depth 0.5 x D = f_z 100%

a_p = cut. depth 1.0 x D = f_z 75%

Drilling

For drilling the feed rate (v_f = mm/min) should be reduced as illustrated.

In addition, chip evacuation is required for larger drilling depths in excess of 0.5 x D.

Lubricants:

- cutting oil, highly activated ■
- soluble oil (emulsion) ■
- air only
