## Assembly Instructions for Double Pedstal Style Table

### Pieces

Table Top

Pedestal Base and Feet

Extensions (if applicable)

### Tools Needed

1/2" Wrench

Blanket

### Instructions:

1.) You first need to attach the feet to the pedestal. Flip the pedestal upside down so that the bolts on the pedestal are on the floor. There should be 2 holes for each leg already drilled on the pedestal. The necessary hardware to attach the legs to the base are on the feet. You can bolt the legs on by reaching inside the hollow base and securing the legs with the washer and nut.

Once the legs are attached, rotate the pedestal so the feet are on the ground.

2.) Slide apart the table top so that the mounting plate is exposed. Place the table top on top of the pedestal base so the holes on the table top line up with the bolts on the pedestals. Once the top is placed on the pedestals secure it with the washer and nut. The necessary hardware is attached to the pedestal base. Make sure you don't over tighten the nuts – they only need to be snug.

# Double Pedestal Instructions, cont.

3.) Open up the table to accept as many extensions as you would like to add. Remember if you are extending it past 4 extensions you will need to use your drop down legs. The drop down legs are attached by a hook underneath the table top.

**Warning:** The drop down legs have a lock that keeps them up and tucked away. Do not yank on them to pull them down. You must disengage the lock fully and they will drop down.

If the base is a little wobbly you can adjust the levelers under each of the feet of the pedestal. Turn the black discs until the desired height is reached.

## Things to note:

The drop down legs need to be used when the table is extended with over 4 extensions as they will provide the necessary support for the table. Do not use the table without the support legs, as the weight of the table may cause the table slides to break.
