

The Complete Redi-Ridge™ System

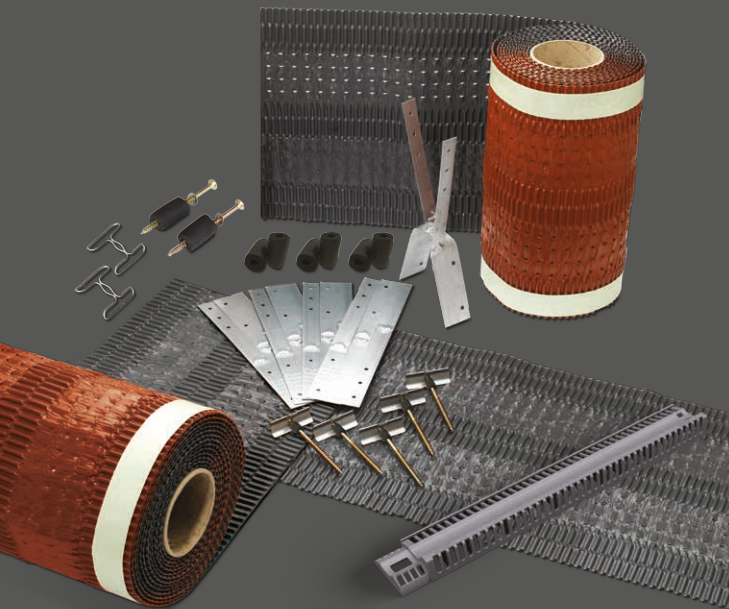

Redi-Ridge is a universal, ventilated dry fix ridge and hip system, consisting of mechanical fixings and a grey coloured powder coated aluminium roll face.

Suitable for use with all Red Bank standard ridge tile types, the hooded ventilation design of Redi-Ridge provides a clear ventilation path, even with slates, whilst preventing water ingress, and overcomes the durability and weathering issues associated with other fabric based roll ridge systems.

Redi-Ridge eliminates the need for intricate ridge union pieces or unsightly mortar joints between ridge tiles which saves time with installation.

Builders benefit from:

- A durable aluminum based system providing unrestricted use
- AA fire rating
- Compatibility with the majority of ridge tiles
- An excellent design life in excess of 30 years.

Available in handy 6m packs to suit your application.

The Redi-Ridge™ Advantage

Redi-Ridge gives builders the ability to meet Building Regulations Approved Document C 2004 which stipulates requirements for resistance to moisture penetration, and BS5250:2011+A1:2016 which defines the level of air openness required of the roof covering. Install continuously to provide ventilation area equivalent to 5000mm²/m.

Aluminium based construction

Conforms and tested to BS8612:2018

Suits all capped, crested and standard ridges

Quick and easy to install

Driving rain resistant

300mm wide

Handy 6m packs to suit applications

Provides continuous ventilation

Redi-Ridge™ Ventilated dry fix ridge & hip systems

RED BANK

a Forterra brand

The hooded ventilation design of Redi-Ridge™ provides a clear ventilation path whilst preventing water ingress.

Capped Angle Ridge

The Ridge Vent Filler provides ventilation at the foot of capped angle ridge tiles which will require two holes to allow mechanical fixing to the ridge batten.

Crested Ridge

The metal Butterfly Clip enables installation of Crested Ridges, providing secure mechanical fixing and positive ventilation.

Plain Angle Ridge

The metal Fixing Plate provides mechanical fixing to the ridge batten and a ventilation gap for plain angle, half round, roll top and slotted roll top ridge tiles.

Hip System

Appropriate fixings are used for the Hip as per specific ridge installation (when used on main ridge and hip, Redi-Ridge negates the requirement of a lead saddle).
