C-Clamps

Aluminum c-clamps are a strong and durable method to hang all your lighting fixtures. The unique design of this extruded aluminum c-clamp provides incredible muscle and the interior "teeth", which grip the pipe, providing a strong and reliable hold. The clamp has roll form threads which provide additional strength and allow smooth backing in and out of the yoke.
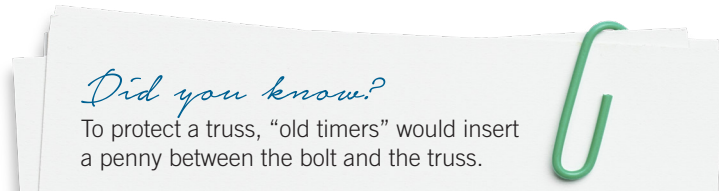

Enjoy the flexibility of hanging all your lighting fixtures with one style of clamp by adding the marine clamp and the mini c-clamp to your road case. The Get-a-Grip™ marine clamp is corrosion resistant in damp environments.

With this kind of flexibility, strength and reliability - Why hang with anything else?

Perma Penny Truss Protector

The Perma Penny is a truss protector that slips directly onto a c-clamp to protect the truss from repeated damage. The Perma Penny remains on the fixture clamp until the next installation. It is compatible with all industry c-clamps and maintains the electrical bond between the fixture and truss. Add years to the life of your truss with this easy to use protector.

Did you know?

To protect a truss, "old timers" would insert a penny between the bolt and the truss.
