

AEP Elite Telescoping Flagpole

20' and 25'

Satin or Black(Dark Bronze)

The American Elite is the industry's highest quality telescoping flagpole.

Designed with both residential and light commercial users in mind, the multiple design patents provide the industry's longest-lasting and easiest to install telescoping flagpole. Our unique "Easy Lock" system provides users the ability to quickly raise and lower the flagpole while the "Swivel Ring System" allows the flag to rotate freely.

• 6000 Series Aluminum Shafts

30% stronger than many competitor's telescoping flagpoles.

• Patented "Easy Lock" System

Extends quickly and easily, securely locking each section in place. No arrows to line up or hard pins to push. Full extension in seconds.

• Swivel Ring System

An aesthetic, quiet, and tangle-free system with no hardware to bang against the pole or rope halyard to wear or tangle.

• Clear Anodized Aluminum Finish and Dark Bronze/Black Options

An architectural-grade anodized aluminum finish that will never rust.

• Shipped Complete with Accessories and U.S. Flag

Includes all components necessary for proper installation.
