## Glass Windshields Installation and Operating Instructions

These tempered glass windshields are designed for outdoor gas fire pits to protect the flame in high wind areas and provide a unique reflective flame appearance while flame is burning.

In addition, they provide an attractive see-through addition to any fire pit.

**IF YOU CANNOT READ OR UNDERSTAND THESE INSTALLATION INSTRUCTIONS  
DO NOT ATTEMPT TO INSTALL OR OPERATE A FIRE PIT**

### WARNING:

- Hot glass will cause burns.
- Do not touch glass until cool.
- Never allow children to touch glass.
- Do not leave fire pit unattended during use.

### CALIFORNIA PROPOSITION 65

### WARNING

This product can expose you to Chromium, which is known to the state of California to cause cancer and birth-defects or other reproductive harm.

## INSTALLATION FOR RECTANGULAR/SQUARE WINDSHIELDS

**Tools Needed:** Phillips screwdriver, soft leather gloves for handling glass, dry flat smooth surface large enough to accommodate the windshield for assembly.

**CAUTION:** It is recommended for two people to assemble the glass windshield. Lay the glass panels on a soft non-abrasive flat surface to keep windshield level.

**Note:** Each GWS kit is designed for a specific type of windshield. Ensure you read and understand how each kit assembles and installs.

**THE KITS LISTED IN FIGURES 1-3 ARE AVAILABLE TO ORDER AS REPLACEMENT PARTS. INDIVIDUAL PARTS ARE NOT AVAILABLE SEPARATELY, YOU MUST ORDER THE ENTIRE KIT**

**Fig. 1** GWS-STRAIGHT BRACKET KIT - Used with rectangle and square windshields.

**Fig. 2** GWS-CURVED BRACKET KIT - Used with round windshields.

**Fig. 3** GWS-BRACKET-S KIT - Used with rectangle and square windshields.

### BEFORE YOU BEGIN

Each bracket uses a silicone plug on the opposite side of the set-screw to secure the glass in place and to prevent glass breakage. Loosen the set screws in all brackets to allow glass to slip inside each bracket.

In most cases, assembly of the windshield will require more than one person to assist. This is because the windshield should be assembled upside down then inverted right side up for installation around the fire pit.

**⚠ WARNING:** Carefully secure the screws into position but do not over-tighten. Warranty does not cover glass breakage during the assembly process.

**CAUTION: THESE WINDSHIELDS ARE NOT DESIGNED FOR WOOD BURNING FIRE PITS. POTENTIAL GLASS BREAKAGE AND DAMAGE WILL OCCUR IF USED WITH A WOOD FIRE.**

**PREPARATION:** Each kit requires partial assembly before installing with the glass panels. You must press the silicone plugs into the back of the flat screws, then thread the screws partially into the brackets and install the screws and feet into the bottom brackets to ready them to secure the glass panels. See Figs. 4 and 5.

**Fig. 4** Installing plug into flat screw.

**Fig. 5** Installing feet to bottom brackets.

## INSTALLATION FOR RECTANGULAR/SQUARE WINDSHIELDS

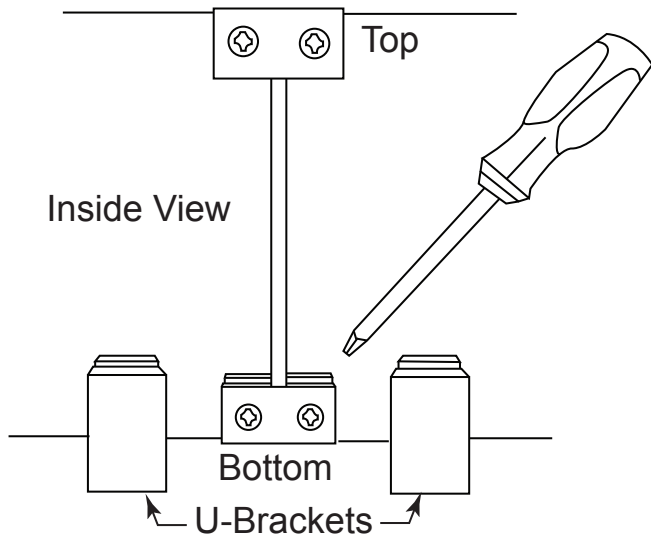

**NOTE:** This section covers both square and rectangular windshields. Review the assembly for a rectangular windshield then go directly to STEP 3, Fig. 8. to assemble a square windshield. Use Fig. 8 for reference.

**STEP 1:** Begin by securing two long glass panels inside a straight bracket. Screw heads should be on the inside of the assembly. Each glass panel should slide all the way into the bracket and top edge should be flush with edge of glass. See Fig. 6.

**Fig. 6** Securing two long glass panels into the straight bracket.

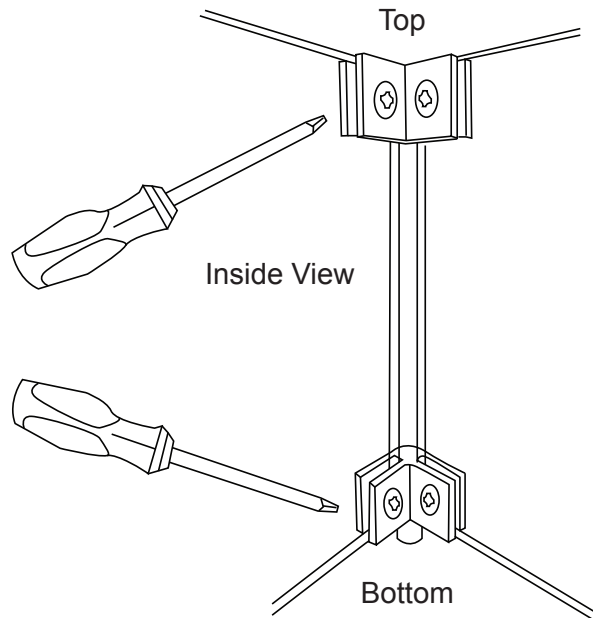

**STEP 2:** Connect the two long glass panels at the bottom using another straight bracket in the same manner. Install two bottom U-brackets approximately 1-inch away from the straight bracket. See Fig. 7.

**Fig. 7** Securing the straight bracket and two bottom foot supports with the Phillips screwdriver.

**Note:** All bottom brackets are provided with a soft pad to prevent any scratching of the fire pit table top surface.

**STEP 3:** Connect end (short) glass panels using the corner brackets. Ensure the corner connector (with foot) is located at the bottom and the other corner connector (without foot) is connected at the top. See Fig. 8.

**Fig. 8** Securing the corner brackets with a Phillips screwdriver.

**STEP 4:** Using one pair of connectors at a time, connect a single glass panel at either end using corner connectors to complete the assembly of the rectangle windshield. See Fig. 8. The short panels are the ends and the long panels are the sides. Ensure the bottom connectors (with foot) are located on the bottom.

**STEP 5:** After all brackets are secured to the windshield carefully turnover the entire assembly, right-side up (feet at the bottom) and place the windshield over-top of the fire pit centering around the burner pan it into place (See Fig. 9). Installation is now complete.

Double check the screws to ensure they did not come loose during installation to the fire pit.

**Fig. 9** Windshield installed (top view).

**Fig. 10** Securing all brackets with a Phillips screwdriver.

## INSTALLATION FOR ROUND WINDSHIELDS

**Tools Needed:** Phillips screwdriver, soft leather gloves for handling glass, dry flat smooth surface large enough to accommodate the windshield for assembly.

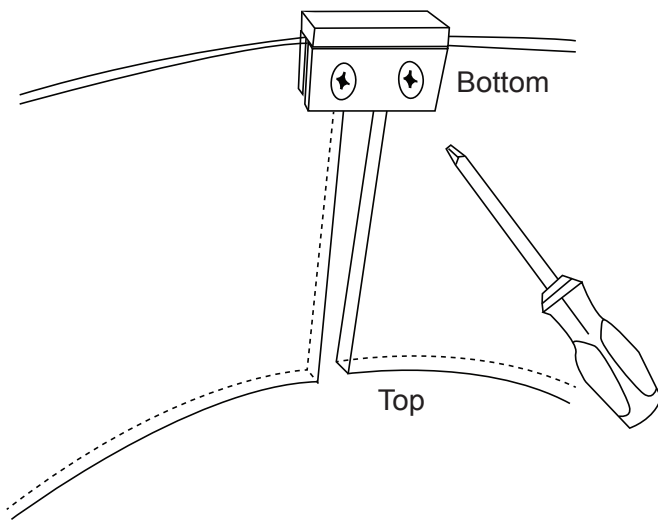

**CAUTION:** It is recommended for two people to assemble the glass windshield. Lay the glass panels on a soft non-abrasive flat surface to keep windshield level.

4- Round Glass Panels

**Fig. 11** Shows carton glass panels and rectangular windshield brackets.

**STEP 1:** Begin working from the bottom up by connecting two glass panels using the straight brackets and (with foot). Each glass panel should slide all the way into the bracket and top edge should be flush with edge of glass. See Fig. 12.

**Fig. 12** Securing the brackets screws with a Phillips screwdriver.

**STEP 1:** Work your way around the glass panels. Keep the screws loose to ensure the brackets are positioned correctly with the glass panel all the way inside the bracket. See Fig. 13. Tighten only after all the brackets are properly in place. **Note:** Screw heads are to be positioned on the inside of the windshield.

**Bottom Bracket**

**Fig. 13** Shows glass paned edge against inside of bracket.

**STEP 3:** Ensure all bracket screws are tightened as much as possible and are properly pressed against the glass. Slowly and carefully, flip the windshield over to the other side with the feet now touching the ground.

**Fig. 14** Shows completed windshield upright and ready for installation over fire pit.

**WARNING:** Carefully secure the screws into position but do not over-tighten. Warranty does not cover glass breakage during the assembly process.

**STEP 4:** Carefully place the windshield over-top of the fire pit centering around the burner into place (See Fig 15). Installation is now complete.

**CAUTION: THESE WINDSHIELDS ARE NOT DESIGNED FOR WOOD BURNING FIRE PITS. POTENTIAL GLASS BREAKAGE AND DAMAGE WILL OCCUR IF USED WITH A WOOD FIRE.**

**Fig. 15** Windshield installed.
