

# Induction

Live, Cook, Love.

# Induction

# Limitless technology, timeless design

ILVE induction hobs combine minimalist elegance, technology and ease of use to ensure high cooking standards even at home. Made of black glass-ceramic, these simple yet refined appliances can become furnishing elements, thereby enhancing the look of the kitchen. The tops are thin, with well-marked areas and functions thanks to a simple, clear graphic design. Sensitive and precise controls ensure optimal control and utmost safety.

They can be adapted to suit the various ILVE styles and are available in the Majestic and Panoramagic range cookers; on the other hand, the Nostalgie, Professional Plus, and Proline collections also include a built-in version.

Power and control, speed and versatility: ILVE induction hobs offer a cooking space that is suitable even for the most demanding chefs. The individual zones are well marked, heat up quickly, and can be easily controlled. The available functions make it possible to keep to cooking times, adjust the temperature, reach boiling point in a few minutes and, in some cases, an integrated extractor hood and the use of a single control to manage two adjacent zones. Outstanding performance, utmost simplicity.

### Bridge control

Induction hobs that have this feature, provide the option of simultaneously controlling 2 adjacent zones with a single command as if they were a single zone.

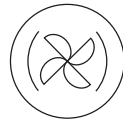

### Booster Function

Allows you to focus all the power of the induction hob in the preset zone to speed up the boiling and cooking times.

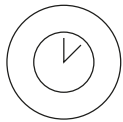

## Slide controls

This handy "touch control" system makes it possible, for example, to increase or decrease the operating temperature by sliding your finger from right to left or vice versa.

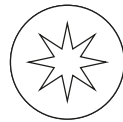

## Integrated extraction

Some models are fitted with an extraction system integrated into the induction hob to optimise the ergonomics and ease of insertion into the space, since the hood is not required.

## Timer with automatic stop

Turns off the active zone once the set time elapses.

## Easy to clean

The glass-ceramic surface and the absence of burners, holes, and screws make it easier to clean the hob after use. All you need is a damp cloth and paper towels.

↑ HVI90AGTC  
Induction hob  
with integrated extractor hood

Induction technology ensures high safety standards during and after the use of ILVE hobs. The surface around the active zone stays cool since there are no naked flames, avoiding any burns. Overheating and liquid spill protection, the child safety function, the residual heat indicator, and the power limiting device reduce the risk of harming people or objects, and prevent power surges. The integrated ILVE safety system makes it possible to cook in a protected environment while keeping everything under control.

### Residual heat indicator

Indicates that the glass is hot and, therefore, one should be careful when touching it and when placing items on it as they might be damaged.

### Power limiting device

If the maximum consumption of the induction hob exceeds the power supplied by the mains, it can be underpowered so as to prevent overloading.

### Overheating and liquid spill protection

If the hob overheats or liquid spills, a safety device trips and interrupts the operation.

### Child safety

Once this function has been set and until it is disabled, the induction hob does not turn on by turning on the controls.

# Induction range cookers

A new way of cooking, more careful and conscious, has to be based on using technologies and tools that ensure a high level of performance and safety.

The ILVE freestanding hob blocks have incorporated all the advantages of induction without compromising the product's features; in fact, you can choose from all ILVE styles, combining an iconic design with cutting-edge technology.

Majestic 100 cm range cooker  
with flush-mounted induction hob and 6 cooking zones  
Blue Grey (RAL 7031) with copper finishes

For large kitchens and ambitious chefs, ILVE has designed a 120 cm induction hob, which is unparalleled on the market for its size, with seven zones to simultaneously handle multiple cooking processes. It is an outstanding example of how ILVE strives to offer the best possible performance to meet its customer's needs, leveraging all the benefits of induction: energy efficiency, fast cooking, safety, temperature regulation, cleanliness, and a minimalist design.

The 4 mm glass-ceramic surface is inserted in the ILVE kitchen flush with the steel frame so that it is on the same level as the worktop: this translates into a clean design that blends in perfectly with the style of the chosen range cooker, but it is also very practical, thanks to a scratch-resistant material and a single seamless surface, which prevents dirt from building up.

# Induction hobs

Whatever kitchen style you choose – contemporary, retro, classic, professional or versatile – the built-in induction hobs blend in perfectly with all ILVE collections. Versatility is a key feature of these hobs, which are easy to combine with the Professional Plus and Pro Line collections, which have a more modern and sophisticated design, the Nostalgie and Majestic kitchens, balancing past and present, and even the Panoramagic hob blocks, with their iconic style.

→ HVI395N/BKG  
Nostalgie induction hob  
90 cm with 5 cooking zones and knob controls  
Black glass-ceramic with brass finishes

The control knobs are an excellent example of how induction can be extremely versatile: the options include touch, slider touch or knob controls (the latter is particularly suitable for the visually impaired). As for the touch and slider touch versions, the exceptionally clean design makes it easy to match the various kitchens, embellishing them with elegant and subtle touches.

The knobs on the Professional Plus and Nostalgie hobs allow for a perfect match with the ovens of the same collections. Technology and innovation are in line with ILVE history, aesthetics and design, creating new balances and interplays.

Induction hobs are ideal for those seeking a single surface: they can be mounted over the top or flush mounted to create a seamless worktop without any obvious unevenness or differences in thickness.

They are available in two widths of 60 and 90 cm for the Nostalgie and Professional Plus collections, while if the style chosen is Pro Line, the versions double: it is possible to opt for widths of 30, 45, 60 or 75 cm.
