

POLYMEDICATION AND PHARMACISTS ROLE

Pharmacists are those who take a request for medicines, dispense the medication to the patient and what is the most important for us **counsel patients on the proper use and adverse effects of that medication.**

The dry mouth problem is not always correctly diagnosed. Patients often don't even know that such a condition exists. And this is why the pharmacists role is so important.

A review of the 200 most frequently prescribed drugs in USA showed the worst adverse drug reactions in the mouth is a dry mouth (80,5%).

Drymouth.info is a comprehensive internet resource about the **RELATIONSHIPS** between **DRUGS** and **DRY MOUTH**.

To sum up, if someone takes 2 or more medications/day they will suffer from a dry mouth.
