

VersaShield Antimicrobial Protection

Products with VersaShield™ are the latest innovation in Infection Prevention Solutions from Versapak, featuring an Antimicrobial Silver Ion (Biocide B60533) impregnated into the material. This inhibits the build-up of bacteria on the surface that can otherwise multiply and spread. This protection will last the lifetime of the carrier.

VersaShield™ is effective against many known microbes. The technology actively kills bacteria including MRSA, E.coli, H1N1, mould and fungus, without the need for chemicals or deep cleaning. The living bacteria can no longer colonise or grow and 99.5% of bacteria are eliminated.
