

NEW HOPE FOR ARTHRITIS SUFFERERS

The sea is a vast resource, providing everything from food to electrical power to the population of the world. And one of its denizens, the humble mussel, could provide relief to sufferers of a wide variety of ailments, from Asthma, and Arthritis to multiple sclerosis according to some leading world health authorities. This is thanks to a simple product called “Lyprinol”, which has been described as “the miracle from the sea”; and which has been proven to be a powerful anti-inflammatory product which comes with none of the side-effects commonly associated with traditional fish oils or steroids or prescription anti inflammatory medicines.

Lyprinol comes from the New Zealand Green Lipped Mussel, which has long been recognised by the Maori people for its nutritional qualities. It is produced by a gentle extraction process using liquid carbon dioxide under pressure to remove the pure oils, leaving behind the rest of the mussel flesh. This process not only guards against allergies and food intolerances, but the stabilisation process used in preparation of Lyprinol protects the rare mix of lipids and Omega-3 fatty acids that are present in the live mussel. And because the Lyprinol oils are closer to the natural state, they are more easily metabolised by the body, thus allowing all the benefits to be experienced from a lower intake. Lyprinol is said to be 200 to 300 times more effective than other fish oils and flax seed.

As a result of its anti-inflammatory properties, Lyprinol is effective across a range of ailments, including Arthritis, Asthma, Psoriasis, Allergies and all joint pains and more.

Recently a double blind clinical trial conducted at the West Glasgow Hospital University NHS Trust involving 60 patients, 30 of whom had classical rheumatoid arthritis and 30 with clinical & radiological evidence of osteoarthritis, showed outstanding results. Both rheumatoid and osteoarthritis patients showed a significant improvement with 76.7% of the rheumatoid and 70% of the osteoarthritic patients benefiting from the trial. If the drop-outs are excluded, then 79% of rheumatoid patients and 80% of osteoarthritic patients benefited

It is important to state that Lyprinol is not a medicine, nor is it prescribable. It is instead a natural remedy comprising a rare combination of lipid groups and unique Omega-3 polyunsaturated fatty acids. It is totally safe and can be even taken by children. And, having been initially developed as a treatment for asthma sufferers, its anti-inflammatory properties were soon recognised and proven to having a far wider reach – even as far as some of the most debilitating diseases known to man.

Asthma

Whelehans, we have found that some asthmatics find Lyprinol[®] relieves their asthma symptoms. Some studies have shown the benefit of Lyprinol[®] in relieving asthma symptoms. The reason Lyprinol[®] benefits asthma symptoms is down to the potent anti-inflammatory properties of omega 3 supplement supplements. Asthma is a long term breathing problem caused by inflammation in the airways. However, more studies are needed before it is conclusively proven to benefit asthma. More information on asthma, including leaflets written by our pharmacist, Eamonn Brady, which give concise, up to date information on the condition.

Lyprinol is available in Whelehans Pharmacy, 38 Pearse St, Mullingar Tel 04493 34591 Web. www.whelehans.ie
