Net Zero Policy

Introduction

Sustainability in manufacturing is one of the biggest challenges for businesses globally. It is not just important but essential that all manufacturing moves towards Net Zero as quickly as possible. This must be attained not only through reduction of waste and carbon footprint but through every aspect of business.

We aim to be thought leaders for SMEs in the UK and we actively engage with local authorities, business groups, and media to help guide others towards better practices.

Processes & Policies

Policy	Current Status
LED lighting & services optimisation	Completed 2018
Wax recycling	Circular process implemented 2019
Metal recycling (in-house)	Circular process implemented 2019
Metal recycling (contracted)	All metals recycled
Plant optimisation	Completed 2018

Goals

Policy	Target	Current Status
100% renewable energy supply	Q4 2020	Complete
Natural gas to electricity transition	Q2 2024	Ongoing
Onsite solar energy generation	2025	Installed by end of 2024
Carbon Neutral Production	2030	Ongoing
