

GreenStalk garden

Plant Planner

What's in this guide:

Refer to page 1 for ideas of what to plant. This is just a short list — you can grow almost anything in a GreenStalk!

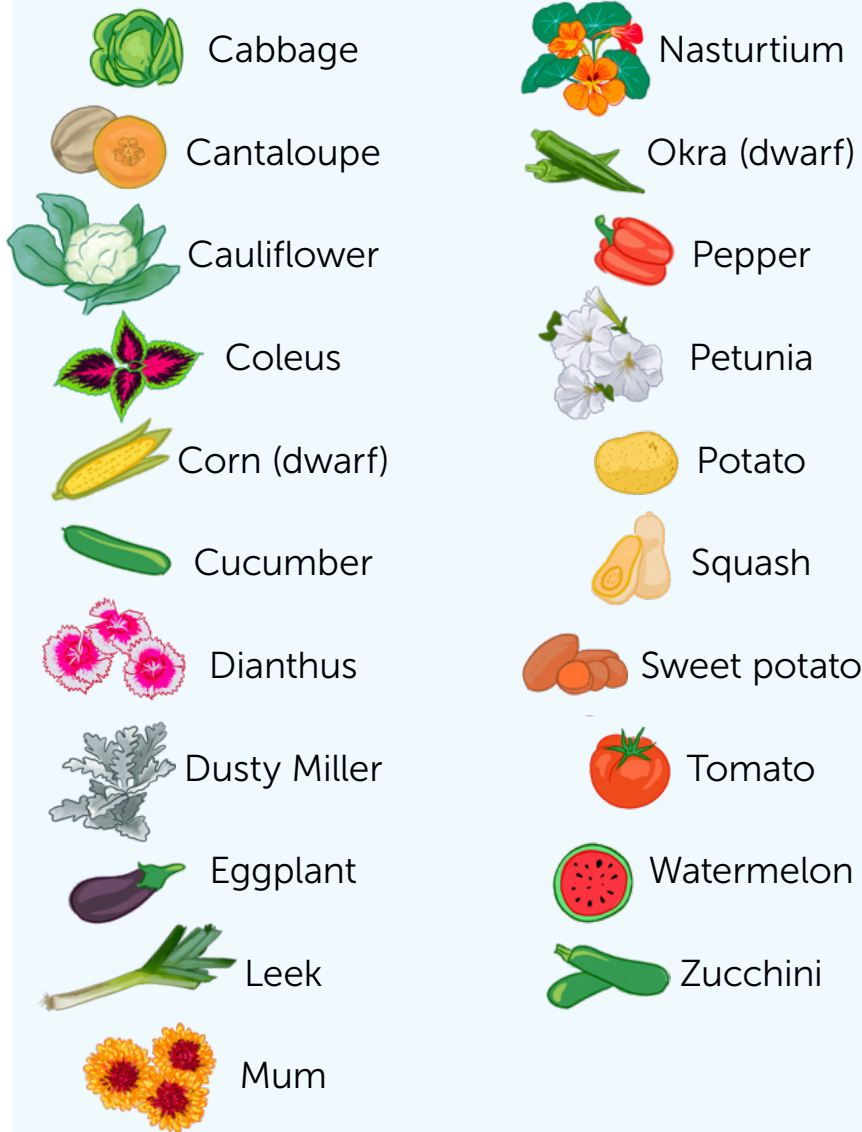

The lists are divided between the Original and Leaf planters. The Leaf is great for smaller plants such as leafy greens and herbs, however anything grown in the Leaf can also be grown in the Original. Most plants do best with 1 per pocket. The plants marked with an asterisk (*) can have more per pocket.

Use the chart on Page 2 to list out everything you're thinking of planting. Then use the template on Page 3 to figure out what goes where!

Planting Tips:

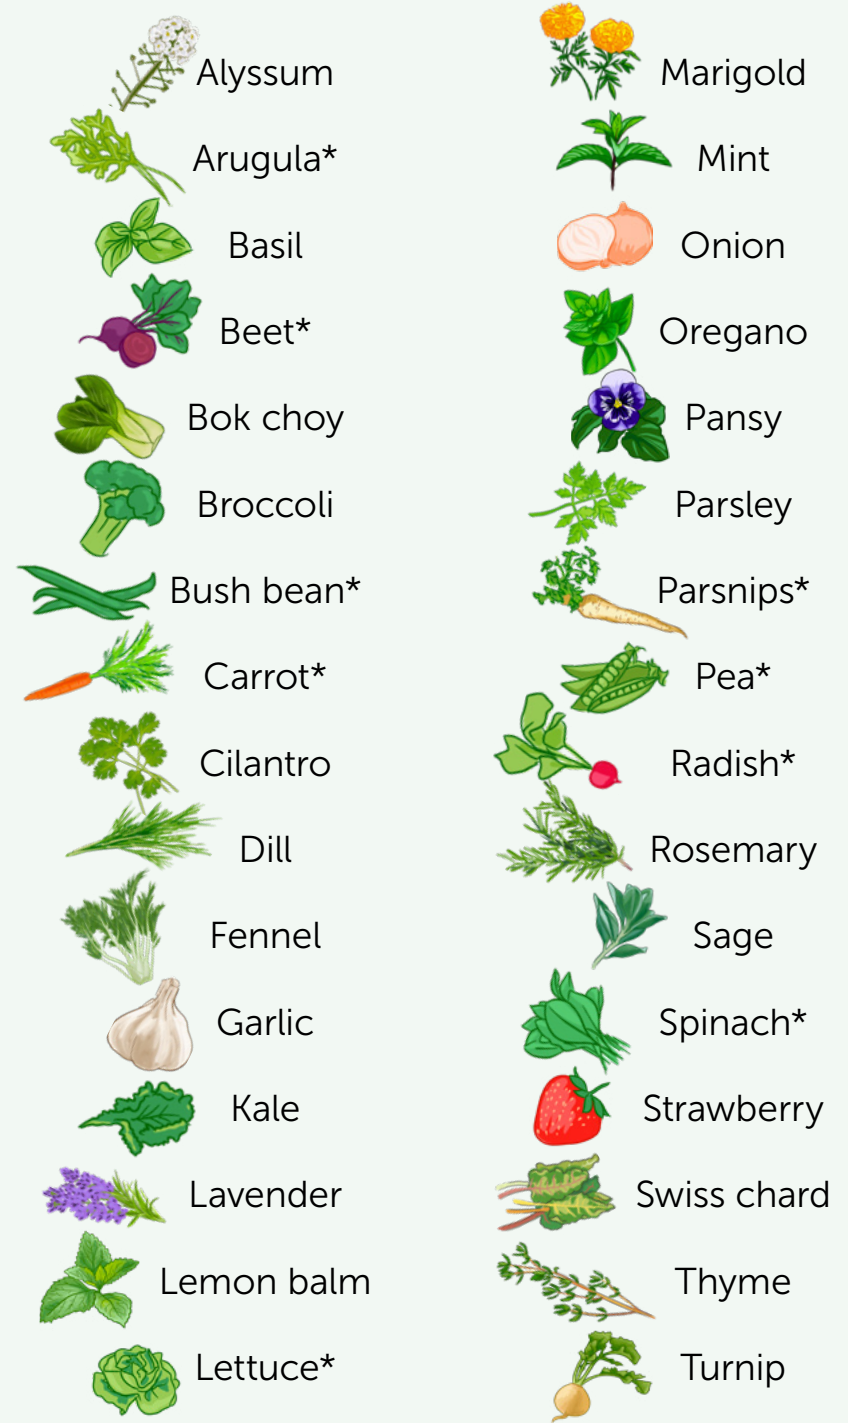

- **Only use soil labeled as potting soil or potting mix.** DO NOT USE raised bed soil, garden soil, or top soil. **Fill soil all the way to the top.**
- Original Planter: 8 gal (1 cu ft) potting mix per tier
- Leaf Planter: 6 gal (.75 cu ft) potting mix per tier
- When planting a mix of plants in a single GreenStalk, place smaller plants on the top tiers and larger plants on the bottom.
- Take care not to pack soil into planters.
- We're here to help you grow! If you have problems, please email us at support@greenstalkgarden.com.

Original

Note: *These ideas are based off what we've tested, but many people grow plants from the Original list in the Leaf with success. Grow the garden you want to grow!* Anything planted in the Leaf can also be planted in the Original. Plant most plants 1 per pocket. Plants with an * can be planted 3+ per pocket.
