PATENT PENDING

INTRODUCING QUIK-LATCH PRODUCTS: Tired of the traditional style of hood pins that rust, or lanyards that scratch the paint? Have you lost your hood pins due to removing the lanyard in hopes of protecting the paint finish?

Quik-Latch Products has developed a new generation of hood fastening technology that far surpasses traditional hood pins in both style and functionality. Automotive enthusiasts often experience problems with: 1) losing hood pins or even forgetting to reinstall them; 2) rust, scratches, and corrosion; 3) lanyards that scratch expensive paint jobs.

Quik-Latch hood fasteners solve these problems with a sleek, and simple yet elegant snap shut and quick release action. Quik-Latch hood fasteners mount to the hood, and line up with studs placed on the core support, or other bracket. Once the hood is closed, Quik-Latch fasteners automatically latch to the studs mounted on the core support, and will not release the hood until the center button on the top of the mechanism is depressed. Quik-Latch products will not rust, can be painted to match your car, and are manufactured in the United States. Customers who utilize Quik-Latch hood fasteners can rest assured knowing that they are adding style, function, and exclusivity to their custom cars. Any reputable custom auto shop should be able to install Quik-Latch products for you, or you can choose to self-install.

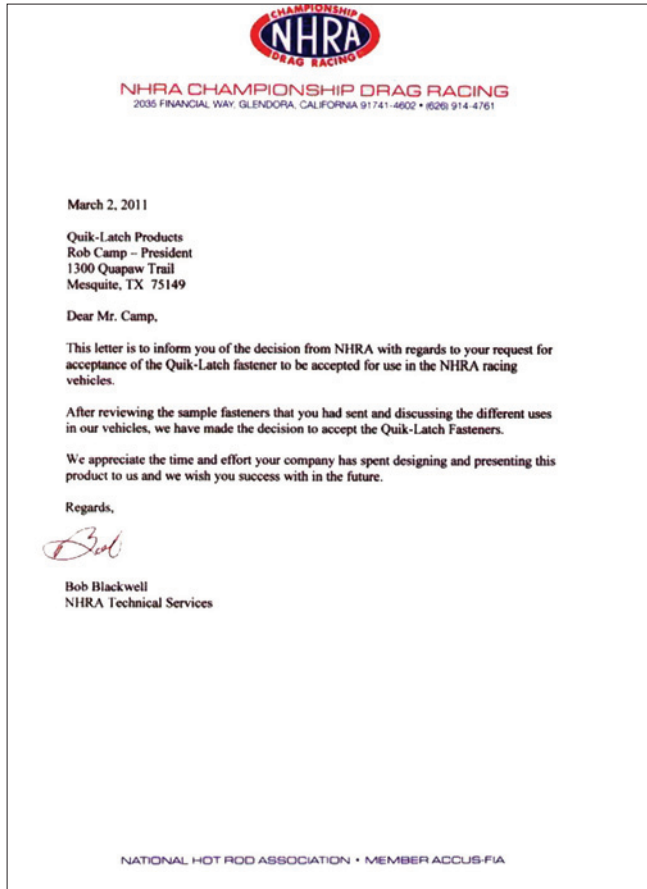

The Quik-Latch Mini Latches have recently been approved for use in competition by the NHRA! Check out the letter below sent to Quik-Latch by NHRA technical services. The Quik-Latch mini latches are highly effective removable fasteners for body panels, hoods, trunks, and interior compartments. The amount of potential applications for the Quik-Latch mini is only limited to the imagination of the installer.

MINI'S

SPUN ALUMINUM

QL-25-S: 1.25" diameter; multi-purpose quick release latch that is versatile and works anywhere a latch is needed.
