

GIVE THOSE OLD NIGHT SPLINTS THE BOOT!

Adjustable Extension Post

Achieves complete extension of the knee enabling a stretch in both the soleus and gastrocnemius

Adjustable Ankle Hinge

Can be set in the office at 0°, 10° or 20° dorsiflexion to provide more consistent and measurable results

Toe Wedge

Engages the windlass mechanism which provides additional stretch on the plantar fascia, supinates the subtalar joint, externally rotates the tibia which allows for full knee extension through the screw home mechanism

An Evidence based answer to Equinus Related Pathologies

The literature is clear: equinus is associated with 96.5% of all biomechanically related foot and ankle pathologies.¹ The EQIQ Brace offers a better solution than night splints with a simple evidenced based stretching treatment. The recommended one hour per day use should provide better patient compliance. ¹ [Hill RS: Ankle equinus: prevalence and linkage to common foot pathology. JAPMA]

Ordering Information

***Please submit inquiries and orders to
service.iqmed@gmail.com or call (317) 426-0393***

The toe wedge attaches via Velcro and can be moved anywhere on the foot bed. Therefore this one size does fit a wide range of foot sizes for both the left and right feet.

Standard Size Fits

US Men's

7 - 13
