Dean Prof. Dr. Muhamed Ajanović

Muhamed Ajanovic is a Dean at School of Dental Medicine, University of Sarajevo, Bosnia and Herzegovina and also an instructor in the field of dental implantology in IFZI, Nurnberg, Germany. Previously at the same school, he was Vicedean for education, visiting clinical associate professor and chief of Prosthodontic Clinic.

From May 2008 to May 2009 he has worked at New York University, Department of Oral & Maxillofacial Pathology, Radiology and Medicine as a visiting assistant professor. He had completed undergraduate studies in 2001 and received diploma with honors for outstanding achievements in the course of studies at School of Dental Medicine, University of Sarajevo. He completed 36-month specialization in prosthodontics and obtained MSc degree. PhD in Dental Science he defended with the dissertation “Relation of Occlusal Interferences, Signs and Symptoms of Temporomandibular Dysfunctions”.

In 2013 he completed certificate program in dental and oral implantology, including course work and supervised instruction in Germany and clinical work in Sarajevo. He has published more than 70 original scientific works and four books in field of dentistry.

The University of Sarajevo

The University of Sarajevo is a public university located in Sarajevo, Bosnia and Herzegovina. It is the largest and oldest university in the country, tracing its initial origins to 1537 as an Islamic madrasa.

The Faculty of Dental Medicine with Clinics was founded in 1960 as a Department at the Faculty of Medicine. Since 1974 it has been as an independent organizational unit that occupies an important position in the national and international higher education system. The Faculty is equipped with 125 new dental chairs, where the teaching process and clinical work takes place, new IT equipment, a renovated and redesigned amphitheatre, and new 4K technology introduced in the teaching process. The teaching process is further enhanced with the most up-to-date equipment: two 3D CBCT diagnostic devices, CAD & CAM technology and dental 3D printers, by means of which students are educated on modern achievements in the field.
