Zee Green Bags

The Eco-Friendly Specialists since 2013

- What sets Zee Green Bags apart from our competitors is our commitment to helping businesses, large and small, and consumers, be more eco-conscious.
- We offer five types of eco-friendly materials <u>biodegradable plastic</u>, <u>bioplastic</u>, <u>compostable</u>
 <u>plastic</u>, <u>eco-manufactured plastic</u>, and <u>recycled plastic</u>. Reference the chart below for the differences.
- For customers with low minimum order quantities, we have over <u>1,200 stock items</u> that can replace your current products with eco-friendly versions.

- For those who need <u>customizations</u> like printing, lip & tape, handles, perforations, wickets, and venting, we offer some of the lowest minimum order quantities in the industry.
- Our experts will work with you to design your green packaging based on how it will be used.
- We will even help you with artwork and provide samples to ensure the size will work for your application.

Don't hesitate to **contact us** at **info@zeegreenbags.com** or **215-385-3933** and let us help you with your commitment to the environment.

Notes

- 1. Degrades 15% within 1 year in landfills. California does not allow the sale of products marketed as biodegradable.
- 2. Compostable certification is only for waste disposed of in a commercial composting facility. Some compostable products are also safe for home composting systems. Our custom compostable and some stock items are home compostable.
- 3. PCR stands for Post Consumer Recycled plastic, plastic that households recycle. PCR is deemed more eco-conscious choice compared to Post Industrial Recycled plastic which is made of scrap produced by plastic film companies. Some stock items contain more than 60% PCR and some less than 40%. And some stock items contain a mixture of PCR and PIR.
- 4. Manufactured with 100% renewable energy and engineered to provide over three times the impact & twice the tensile strength of traditional LDPE film so less plastic is used.
- 5. Manufactured in the United States eliminates the significant impact on the environment associated with the transportation of goods overseas as per the Wikipedia page titled Environmental Effects of Shipping.
- 6. Some biodegradable and compostable stock items are imported. All custom products are manufactured in the United States.
- 7. Recycling compostable is detrimental to the recycling process.
- 8. Printing on compostable plastic is limited to a certain amount of coverage and the colors being used so that it can remain certified compostable.
- 9. Due to surface irregularities, printing on recycled plastic is not as crisp as other material choices.
- 10. Stock items contain a different percentage of bio-based material.
