

Cleaning the Oven/Broiler Thermocouple

1. Remove the cooking grill by pulling up on either the left or right side.
2. Remove the cooking sink by undoing the 4 screws holding it to the stove. 2 on the left and 2 on the right
3. Remove the two thermocouples with an 8mm wrench, scour the ends with fine sandpaper or something equally coarse and then reconnect the thermocouples.

4. Test the oven and broiler to see if the connections have been re-established. If not, then repeat step 3.
5. Undo the large nut on the oven valve
6. Remove the inner plunger and lightly sand both ends with something coarse
7. Replace the plunger and tighten the large nut back on and re-connect the thermocouples
