

P9000

Propane Heater

dickinson

MARINE

- 100% Marine Grade Stainless Steel
- Direct Vent - Uses No Inside Air
- Glass Viewing Window
- Low Fuel Consumption
- Comes with Chimney, Cap & Backplate
- 12v Circulation Fan (Also 24v & 32v)
- Heats 800 Cubic ft (10' x 10' x 8')

Installation Parts

Two Stage Regulator	19-162
Single Stage Regulator	19-151
Disposable Bottle Kit	19-150
10ft Propane Hose	19-100-10
20ft Propane Hose	19-100-20
Solenoid	19-153
Gas Alarm w/ Sniffer	19-154
10" Chimney Extension	19-005
28" Chimney Extension	19-000
18" Flue Guard	19-030
Cap Guard	19-080A
Weather Guard (for use w 19-080A)	19-210A
Weather Guard (Cap Only)	19-200A

Fuel Consumption

Low	7hrs/1lb
High	5hrs/1lb

Heat Output

Low	3200 BTU
High	4500 BTU

Width	8.5"
Depth	5.5"
Height	14"
Backplate	8.375" x 0.65" x 23"
Weight	22lbs (10Kg)

The Newport P9000 propane heater is a low output/low consumption solution for heat in a small space. The direct vent design ensures none of the traditional moisture build up associated with propane heating and allows the heater to use outside air for combustion instead of interior air to keep oxygen levels steady with no worry of oxygen depletion. Despite its low output, the P9000 will consistently put out a good amount of dry heat to keep your small space warm and toasty.

The P9000 propane heater comes with one 28" length of flexible chimney to allow you to accomplish installations in tight spaces. The maximum length of the chimney is 56". Also while we recommend a straight installation if possible, the flexible venting allows for a horizontal exit. Included as well is a cap that doubles as a through deck fitting. The cap comes complete with a thick rubber gasket for a water tight seal and a stainless steel dress ring for the interior of your boat.
