PART #BXB-912

2003 to Present Buell XB9 & XB12 Performance Clutch Kit

This kit consists of 8 performance friction plates, 7 steel plates and a 15% stronger than stock diaphragm spring. Plates should be pre-soaked in the same fluid you will be using in the bike for about 10-15 minutes. The type of fluids we recommend are any HD petroleum based, non-synthetic, primary oil, as light weight as possible, or even a good petroleum based motor oil such as 10/40 or 20/50 in weight. You can even use ATF Type F or B&M Trickshift. **THE USE OF SYNTHETICS IS NOT RECOMMENDED AS THEY TEND TO CAUSE SLIPPAGE.**

Start with a friction plate and end with a friction plate. As for the **Buell 2003 and later XB9R and XB12 versions**, you will have 1 odd friction plate with a spring dampener and a seat spring dampener that will fit inside the very first friction plate. **Remove all those pieces as you will NOT use them with this kit.** If you are not the original owner, these pieces may have already been discarded.

These are just some helpful hints. For further technical assistance, always **refer to your owners manual.** Feel free to give us a call (602) 438-7052.
