KICK START BOTTLE

When & How:

- To kick-start HOTBIN in winter or re-start if waste has gone cold after being away.
- Create a base layer of waste around 40cm deep (hatch panel height).
- Make a space in the top layer of waste, carefully fill bottle with hot water, replace lid tightly, situate and cover with waste.
- Leave for 24 hours and do not open the lid.

Result?

The bacterial process will be kick-started and the temperature should rise **above 20°c** after 24 hours, if not repeat process. If this fails please refer to instruction manual for help.

WARNING

Bottle is extremely hot once filled - wear gloves if possible and handle with care. This is designed to hold hot water - **DO NOT** substitute with another plastic/glass bottle as this may cause injury.
