

Pet Waste Composting

What is EnsoPet?

EnsoPet is an innovative inground composting system, specifically designed for composting pet waste, easily and hygienically.

EnsoPet composts all pet waste such as Dog, Cat, Rabbit and Guinea Pig.

How does EnsoPet work?

EnsoPet is simple to install. The bottomless cylinder is buried in the garden with just the lid and opening above ground level.

Once installed in the garden, using the tongs provided, pet waste is collected and dropped in to the composter. EnsoPet Starter is then sprinkled on top. The micro-organisms in the EnsoPet Starter ensure a rapid breakdown of the waste.

Due to this continuous cycle of composing the EnsoPet composter will take many months or may never completely fill, ensuring extended use. If your composter fills, you simply move it to another location in your garden.

Why compost pet waste?

Uncollected pet waste is messy, smelly and unhygienic. Composting pet waste keeps your yard clean and provides a healthier environment for your family and pets.

Pet waste left in public areas such as parks, beaches, nature strips and footpaths is unsightly and pollutes our environment. Rain washes uncollected waste down the drain resulting in the pollution of our waterways. By collecting pet waste you are helping to reduce this negative impact on our environment.

The popular method of collecting pet waste, in plastic bags and disposing in rubbish bins, is not ideal. There are over 4 million dogs in Australia each producing up to 100kg of waste annually.

Composting pet waste with Ensopet would successfully reduce tonnes of plastic bags and pet waste ending up in landfill, while at the same time returning carbon and nutrients to the soil.

What is EnsoPet Starter?

EnsoPet Starter has been specifically developed for composting pet waste. It is made using a mixture of wheat, sawdust, and minerals combined with a group of micro-organisms.

These all-natural micro-organisms include lactic acid bacteria, yeasts, photosynthetic bacteria, actinomycetes and fungi.

These micro-organisms accelerate the breakdown of the waste, eliminate smell and help remediate any pathogens in your pet waste, and ultimately contribute to a healthier soil and a more beautiful garden.

What are the benefits of composting pet waste with EnsoPet?

- It is a simple no fuss system
- It keeps your yard free of pet waste
- It eliminates odour
- It is discrete; it is an inground composter; only the lid is above ground level
- EnsoPet Starter ensures a rapid break down of Pet waste
- EnsoPet Starter helps remediate any pathogens in your pet waste
- It diverts pet waste away from landfill
- It returns carbon to the soil
- It enriches and rebuilds soil on a microbial level

How do I get started?

Purchase the EnsoPet kit which contains everything you need to start composting your pet's waste.

The EnsoPet kit contains:

- The easy to assemble recycled plastic composter
- A 1 kg bag of EnsoPet Starter
- A pair of tongs
- Full instructions

Once assembled the EnsoPet composter measures
40cm high x 35cm across

1300 902 880
