Another great product from...

Oxygen is essential for successful composting.

Regular aeration gives the microorganisms the oxygen they need to thrive and transform waste into nutrient rich compost.

Using the EnsoRator in the EnsoPet composter will significantly expedite the composting process. This leads to increased capacity in the EnsoPet, prolonging the time it takes to fill or making it less likely to fill.

The EnsoRator can also be used to extract compost, pull out weeds, loosen soil, and create planting holes.

## The EnsoRator...

- ✔ Fits inside EnsoPet to aerate pet waste compost
- ✔ Made with strong 10mm stainless steel
- ✔ Light weight and easy to use
- ✔ Plastic free product
- ✔ Height adjustment for raised garden beds

It can do so much more...

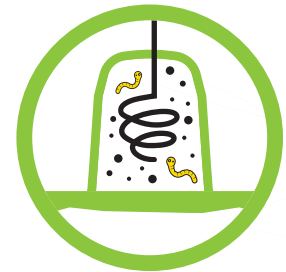

Create holes for new planting

Pull out weeds

Aerate compost

Extract compost
