## LAB VALUES 1

### Across

---

2. Normal troponin value is \_\_\_\_\_ than 0.6ng/ml.
4. The vena cava empties into this atrium of the heart.
6. These veins carry oxygenated blood.
8. Normal PSA level is less than this value.
9. A level of BNP that is higher than 300 is indicative of severe failure of this organ.
13. Plasma without the proteins which clot the blood.
14. This value is 40% to 54% in males and 38% - 47% in females.
15. This lymphatic vessel (duct) is found on the left side of the body.
16. The P in BNP.
18. Increased serum values of this mineral are seen with lithium toxicity and the use of antacids.
19. This serum level decreases during pregnancy and loss of muscle mass.

### Down

---

1. This pale yellow viscous fluid makes up 55% of the blood volume.
2. These nodes act as filters.
3. This hormone is decreased in adrenal insufficiency and panhypopituitarism.
5. Space surrounding the cells outside of the vascular system.
7. Salicylates, thiazide diuretics and this class of drug increase amylase levels.
10. This count is normally between the range of 5,000 - 10,000 cells per microliter.
11. Increased serum values of this mineral are seen with metastatic bone tumors and sarcoidosis.
12. Increased levels of this enzyme is associated with acute pancreatitis, renal disease and peptic ulcers.
14. This hormone is under 3 when not pregnant and rises significantly to 50,000 from four months to term.
17. This output is normally 1 ml per kg per hour.
