

NC Natures Composites
Leaders in Sustainable Fencing

ABOUT NATURES COMPOSITES

Natures Composites was founded in Wyoming nearly two decades ago with a vision to develop sustainable products that look better, last longer, and cost less than traditional outdoor materials. With an unwavering commitment to environmental responsibility, we embarked on a mission to develop a proprietary sustainable composite formula utilizing wheat straw, a by-product derived from wheat grain harvesting. Our primary goal is to harness the abundant annually renewable materials found throughout the United States, offering an eco-friendly alternative to wood in conventional composite materials, commonly known as WPC (Wood Plastic Composites).

Traditional Picket Fencing

Bring timeless charm to your projects with our classic fences that combine 3.5 inch and 5 inch wide pickets in four natural wood-inspired colors. Designed to look the same on both sides to be neighbor friendly, this collection is available in full size and perimeter, offering options for both semi-privacy and full privacy needs. Engineered as a ready-to-install, user-friendly system, all components are pre-drilled and include all necessary screws. Once posts are buried in the ground, only a screwdriver is required to complete installation.

Modern Fencing

This patented system, with a wind rating of 100 mph (Category 1 Hurricane Wind 74-95 mph on the Saffir Simpson Hurricane Wind Scale), allows our boards to effortlessly free float, eliminating the need for fasteners. Ready-to-install and designed to look the same on both sides to be neighbor friendly, it presents a variety of contemporary fences that fuse style and functionality. Offered in four wood-inspired colors, it includes composite full privacy and semi-privacy fences, as well as a diverse selection of mixed material options. These fencing options integrate a variety of materials, including steel cable, nautical marine rope, artificial green ivy, welded wire, and even printed screens, making it easier than ever to build your dream fence.

Railing

Designed to match the NC Terra modern collection, these rail models are all available in the same four wood-inspired tones as our fences. This way, you can perfectly coordinate your fences and rails for a customized look. An ideal selection for an open air feel, our residential ready-to-install railing combines functionality with beauty.

Commercial Grade Fencing

Available in both 6 and 8 ft tall, this line of sustainable products is designed for commercial projects due to their exceptional endurance, including a wind rating of 130 mph (Category 3 Hurricane Wind 111-129mph on the Saffir Simpson Hurricane Wind Scale). The design of our composite boards features air pocket cavities that enable noise reduction. Whether your needs pertain to HOA applications, government municipalities, dumpster enclosures, auto charging stations, utilities fencing, field operations fencing, or commercial pool fencing, we are committed to exceeding your requirements.
