

Pulsed Xenon UV Dosimeter

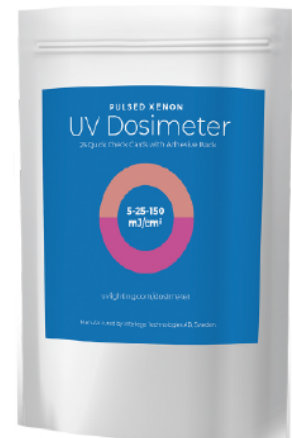

SKU: DC-HD-25

The pulsed-Xenon UV Dosimeter provides a visual indication of successful germicidal irradiation by revealing a check mark when exposed to 5mJ/cm² of broad-spectrum UV. Using a patented photochromic ink, the yellow center on the card changes color to indicate the intensity of the dose delivered from 25 to 150 mJ/cm².

PRODUCT SPECIFICATIONS

- Designed for use with pulsing Xenon light sources producing broad-spectrum UV output.
- Provides visual evidence of UVGI with 25 and 150 mJ/cm² indicators.
- Recommended for use with every disinfection cycle or on predefined intervals.
- Ideal for use in any environment with a pulsed-Xenon product.
- Low cost, easy to use
- 3-year shelf life
- Designed in collaboration with Intellego Technologies, manufactured in Sweden.
- Not a substitute for microbiological verification of disinfection.
