## TROUBLESHOOTING

Designed for iPhone 6s, iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPad Air, iPad mini, iPad (3rd and 4th Gen) and iPod touch (5th Gen).

- Make sure the VERT® unit is CHARGED.
- Make sure the VERT® unit is ON, confirm by push button and having screen light up.
- Make sure battery is fully charged (this will be shown on VERT® unit as well as battery indicator bar on App once paired).
- Make sure VERT® unit is near your smart device for pairing. If you are using multiple VERT® units, hold the VERT® unit you want to pair with smart device close and look for strongest signal. Press connect on VERT® app and verify your connection by pressing the push button and see background of app connection change from GREY to RED every time you press push button on VERT® unit.

**Q: When using the VERT® App sometimes the vertical jump is not immediately recorded?**

**A:** This happens when signal quality is POOR. The VERT® device will store that last vertical jump and send it to your smart device as soon as it is back in range. The standard range is 100-150 feet line-of-sight. Your range increases substantially in a closed environment. TEST YOUR RANGE! Open areas such as an outside basketball court will reduce the Bluetooth signal of the device. Reception quality is dramatically improved in close proximity. Metal objects around or close to VERT® unit or the smart device can disturb and block the signal. Avoid covering VERT® unit with anything made out of metal.
