Bottle Stopper Care Instructions

- *The dropper and decorative top can be polished with a soft cloth.*
- *Do not submerge wooden bottle stoppers.*
- *If your bottle stopper becomes dirty, wipe it down with a little soap and water and allow to dry.*
- *Some woods change color with strong UV light exposure and/or age.*
- *Droppers are stainless steel and will resist damage from contact with alcoholic beverages.*

If your bottle stopper is resin or is finished with a durable CA coating (glossy, "candy-coat") and has become badly scratched, plastic polishes (such as Novus) can help restore some of their shine.
