Hybrid Pen Care Instructions

- *The pen body, plating, and hardware can be polished with a soft cloth.*
- *Refill instructions are specific to the pen hardware; please visit our website for pen refill instructions and videos.*
- *If your pen has threads and they are squeaky or tight, a very small amount of wax in the threads can help.*
- *Some woods change color with strong UV light exposure and/or age.*

Our hybrid pens are finished with a durable CA coating. If the body of your pen has become badly scratched, plastic polishes (such as Novus) can help restore some of their shine.
