## Pepper/Salt Mill Care Instructions

- *The mill can be polished with a soft cloth.*
- *Do not submerge wooden mills.*
- *If your mill becomes dirty, wipe it down with a little soap and water and allow to dry.*
- *Some woods change color with strong UV light exposure and/or age.*
- *Most mills are refilled by unscrewing the finial (knob) on the very top, removing a top plate, and adding salt/pepper.*
- *To adjust grind, tighten (or loosen) the finial (knob) on top of the mill.*

*If your mill's grinder mechanism is ceramic, it will work with pepper or salt. If it's stainless steel, only use it with pepper, as salt will corrode the metal over time.*
