## Wooden Pen Care Instructions

- *The pen body, plating, and hardware can be polished with a soft cloth.*
- *Refill instructions are specific to the pen hardware; please visit our website for pen refill instructions and videos.*
- *If your pen has threads and they are squeaky or tight, a very small amount of wax in the threads can help.*
- *Some woods change color with strong UV light exposure and/or age.*

*If the body of your pen has a CA finish (shiny, hard, glossy "candy-coat" finish) and has become badly scratched, plastic polishes (such as Novus) can help restore some of their shine.*

*If the body of your wooden pen has a wax or oil finish and looks "dry", a little wax or a touch of wood finish oil will renew it.*
