THE QUIET SOLUTION FOR A SILENT EPIDEMIC

Dr. David Minkoff, MD
Expert in Alternative Health, Integrative Medicine and Infectious Disease
BodyHealth Founder

Metal toxicity can cause serious damage to your vitality and can be very difficult to diagnose if your medical practitioner isn’t acutely aware of metal toxicity issues. And we are ALL dealing with this on one level or another.

Don’t wait until it’s too late. Prevention is vastly cheaper and easier (and much less stressful) than trying to manage symptoms of toxicity.

Metal-Free was designed from the ground up to be one of the gentlest, most reliable, and most effective heavy metal oral chelation spray available.

In one case study, it increased mercury excretion over 600% and completely turned around a child’s performance in school. It’s easy to use, just a few sprays in the morning is all it takes. Metal-Free is designed to be a quiet, simple solution to a genocidal epidemic.

I wish you well on your path to a long and prosperous life.

Dr. David Minkoff, MD

FREQUENTLY ASKED QUESTIONS

Q: What benefits can I expect from Metal-Free?
A: Patients who follow the Metal-Free program can expect their bodies to recover from the effects of heavy metal toxicity. Because the effects of heavy metal toxicity can vary greatly from person to person, the benefits people experience will vary.

Q: Why can’t I do a simple urine or hair analysis to determine if I have high levels of mercury or other heavy metals?
A: Far too many toxic elements such as mercury, cadmium, arsenic, and uranium excrete into the feces in the primary natural route of elimination from the body. Therefore, stool tests provide the best analysis.

Q: How long do I have to take Metal-Free?
A: Metal-Free detoxification programs usually take anywhere from three to twelve months, depending on the toxic load. It is possible for it to take longer due to factors such as current toxic exposure, age, general health and other factors. Some patients may not experience the full benefits of freedom from heavy metals until their entire prescribed treatment is complete.

Q: Is there any evidence to support claims for Metal-Free?
A: There is clear evidence showing that the ingredients in Metal-Free are clinically effective in eliminating heavy metals. Additionally, we have highly detailed case studies and other articles with more information about Metal-Free in our blog section. Please visit BodyHealth.com

Q: What’s the most effective way to take Metal-Free?
A: For the first week, start with 1-2 sprays in the morning. 20 minutes before eating, drinking, or brushing teeth. Hold in your mouth for a minute or so. Gradually build up to 8 sprays every day. If prescribed by a physician follow their instructions carefully.

Q: I have metal fillings; can I still benefit from using Metal-Free?
A: Meta-Minerals is often used after mercury fillings have been removed but this is NOT mandatory. Benefits from a reduction of heavy metals substrated in your tissues can still result from the use of Meta-Free. In this case, the instruction would be to place the correct dosage of Meta-Free in the back of your throat using an eye dropper, then swallow. Three to four drops equal one spray.

METAL-FREE
HEAVY METAL DETOXIFICATION

• All natural heavy metal chelator with proven ingredients
• Combination of ingredients effective for all heavy metals including Mercury, Arsenic, Lead, Cadmium and even Aluminum
• Removes radiological contrast metals like Gadolinium
• Does not deplete beneficial minerals like Zinc, Magnesium, etc

READY TO ORDER?
Your first bottle of Metal-Free will last up to two months, then you should use one bottle per month.
Please Call: (877) 804-3253 or Visit: Metal-Free.com

“Free yourself from the debilitating effects of heavy metals Today!” – Dr. David Minkoff

EXPOSURE TO HEAVY METALS

Humans are exposed to a wide array of heavy metals via items we use daily, like cookware, cosmetics, and antiperspirants, and in certain substances we may consume (like soda from a can or fish) or be exposed to (like tobacco or smoggy air). Some of the most common heavy metals we come into contact with include aluminum, cadmium, lead, mercury, and even arsenic. Many people don’t realize that getting tattoos or using hair dye, among other consumer items containing heavy metals can actually be contributing to heavy-metal toxicity levels.

HEAVY METAL TOXICITY

When people are suffering from a high level of heavy metals in their body, they can be described as being “heavy metal toxic.” Harbouring high levels of heavy metals in the body can contribute to a wide variety of negative symptoms. Unfortunately, heavy-metal toxicity is often misdiagnosed or overlooked—thus many people are suffering from the symptoms for a prolonged period of time before the cause is identified. Metal toxicity can interfere with the routine functioning of certain organs and body functions, which brings on debilitating effects on the body.

SYMPTOMS:

**Arsenic toxicity** include vomiting, diarrhea, dark colored urine, dehydration, cardiac problems, and vertigo. A common indication is skin lesions, eczema and other uncommon skin issues. Well water is the largest source of arsenic poisoning which can also lead to contaminated food crops.

**Cadmium toxicity** commonly appear as flu-like symptoms like body aches & pains, chills, weakness and soreness. Swelling of the nose, pharynx and larynx are common with sustained inhalation. Rice and grains may be treated with herbicides that contain Cadmium. Other sources include contaminated fish, meat and produce. Foods imported from Asia are also common sources.

**Lead toxicity** include developmental delays, abdominal pain, neurologic changes, and irritability. At very high levels, it can be fatal. Lead based paints, contaminated water from lead pipes and environmental pollution are the largest contributors.

**Mercury toxicity** include developmental issues with infants, cognitive impairment, neurological issues and organ failure. Emissions from coal-fired power plants contaminates waterways and as a result, our food chain. Other common sources are amalgam fillings, and some vaccines.

DO NOT PANIC...

THERE IS HOPE!

Using a cutting edge combination of natural ingredients and modern biotechnology, Metal-Free uses the most effective metal-binding peptides found in nature.

Unlike pharmaceutical chelators that bind metal with only a single bond, Metal-Free forms a cage-like bond around heavy metals, which is much stronger than typical chelators. This keeps the toxins from being “dropped” and redeposited elsewhere.

Metal-Free is all natural, derived from a unique culture of bacteria and algae renowned for their ability to bind heavy metals in their environments. These nano-silver peptides are derived from living systems, using much of the same cellular mechanisms that our own cells use.

The unique form of these nano-scale particles allows it to be absorbed by your mucosal membrane, which means it can be delivered in a simple oral spray and can penetrate the blood-brain barrier.

Metal-Free is a game changer when it comes to detoxing heavy metals and restoring your natural, vibrant health.

A GENTLE, SIMPLE ALTERNATIVE

Metal-Free Oral Spray formula and the accompanying Metal-Free Program can help the body eliminate toxic heavy metals and support heavy-metal detoxification when combined with a healthy lifestyle. Metal-Free creates a cage-like bond to the metal particles, which the body recognizes as waste and is eliminated through the bowels. This tends to be a safer option, as it avoids any chance of causing stress to the kidneys.

NANO-SIZED: The active ingredients in Metal-Free are a collection of unique, biological ingredients called “peptides” that are produced through a scientific process where beneficial soil and marine bacteria are specifically combined in a “nutrient broth” under very exact conditions. These peptides are extremely small, called “nano-sized” which the body sees as nutrients, so they are absorbed by the body, penetrating the surfaces of organs and body tissue. This is an advanced penetration technology and makes Metal-Free exceptionally effective.

TRIPLE BOND: Once Metal-Free is in the tissues, it binds to available heavy metals with three different kinds of “bonds”, unlike other chelating agents, which usually only have one bond, which is not as strong and in some cases can un-stick on its way out — and get dropped off in another part of the body which could be even worse. Metal-Free’s triple-bond is very secure and makes elimination successful.

PAIN-FREE ELIMINATION: In contrast to other metal detoxification products, the toxic particles are “seen” by the body as a waste particle and sent through the bowels (and sometimes hair). Other products go through the urine, which can actually damage or cause pain to the kidneys.

SUGGESTED USE:

For the first week, start with 1-2 sprays in the morning, 20 minutes before eating, drinking or brushing teeth. Hold in your mouth for a minute or so. Gradually build up to 8 sprays every day.

If symptoms present, contact your practitioner and back down the number of sprays.
