

ENDORSED BY PETER MAC - DENTAL ONCOLOGY UNIT AS THE PREFERRED DENTAL HYGIENE AGENT - FOR BOTH PREVENTATIVE & SYMPTOMATIC RELIEF

Denta-Med™ Dry Mouth Gel - Moisturising Gel AND toothpaste in ONE product - Providing 8 hours relief from Dry Mouth.

Denta-Med™ Dry Mouth Oral Hygiene Spray - Same formulation as Denta-Med™ Dry Mouth Gel without the thickener. Delivers a very fine mist of Denta-Med™ with a 360 degree nozzle for convenient 'on the go' use through the day.

Denta-Med™ Dry Mouth Moisturising Mouthwash & Spray - With natural Malic Acid (derived from apples, apricots, strawberries, celery) pH neutral, naturally moisturising with a gentle hint of lemon myrtle. Leaves the mouth with a smooth, moist velvety mouth-feel.

Denta-Med™ pH Neutralising Mouthwash - Contains Sodium Bicarbonate, reducing harmful high oral acid levels in the mouth and protecting teeth from enamel erosion. Best results, use before brushing teeth.

Denta-Med™ Denture Adhesive Gel - with all natural Sclerotium Gum. Apply once in the morning to secure. Seals, eliminating access for food debris to enter underneath. Neutral taste, easy to clean off with only water.

Denta-Med Ingredients

Fluoride (Sodium Fluoride 1,000ppm)
Is a natural mineral. Fluoride is also present in some food and drinks (fish & tea) Fluoride reduces the amount of acid that bacteria leave on your teeth, Fluoride is also proven to strengthen tooth enamel. This is very important. As enamel is weakened, small holes in your teeth (cavities or dental caries) can form.

Zinc Chloride

Has anti-inflammatory properties and is an essential trace element for maintaining good oral health. Zinc is known to help reduce the incidence of aphthous ulcers, plaque build-up & bad breath (halitosis).

Cetylpyridinium Chloride (CPC)

Has anti-bacterial & anti-microbial benefits. CPC is reported to improve gingival (gum) health. CPC was first described as having clinical anti-plaque (can be removed by brushing) and anti-calculus (also known as tartar, hardened plaque that can't be brushed away) effect in 1962. CPC has been recently identified to have anti-plaque & anti-calculus effect in 1962.

Proprietary Chitin

Is a naturally occurring polysaccharide. Chitin has wound healing properties, stimulating the recovery of damaged epithelial (mouth) cells (common in people using respiratory inhalers) Chitin has anti-inflammatory & film forming properties. (Denta-Med™ Proprietary Chitin is plant derived)

Malic Acid

Malic Acid is a naturally occurring alpha hydroxy acid (AHA) found in various fruits, particularly apples. Malic Acid is a humectant, it helps to attract and retain moisture in the skin. This can help to improve hydration levels & prevent dryness.

Sodium Bicarbonate

Sodium bicarbonate has anticaries & abrasive properties. It works as a mechanical cleanser on the teeth & gums, neutralises the production of acid in the mouth, and acts as an antiseptic to help prevent infections.

Sclerotium Gum

Sclerotium Gum is a naturally derived polysaccharide polymer, replacing PVM/MA copolymer (glue) in Denta-Med's Denture Adhesive Gel.

Denta-Med Dry Mouth Products FORMULATED FOR YOUR MOUTH

(Additional Information)

Toothpaste containing both fluoride and zinc has been proven to be more effective in preventing dentine demineralization and promoting remineralization, when compared to those containing fluoride alone (Ref; Zinc: A precious trace element for oral health care? Fatima T, Haji Abdul Rahim ZB, Lin CW, Qamar Z J Pak Med Assoc. 2016 Aug; 66(8):1019-23.)
