

# EMX 202 S EXIT PROBE

The EMX 202 S probe is used to open the gate for vehicles leaving the property. Bury the probe as far back from the gate as the cable will allow. Six to eight inches is deep enough for the probe and the cable. Connect the color-coded cable wires to the gate operator as shown below.

\*\*\*Allow probe to calibrate for 5 minutes everytime you power up your system.\*\*\*
