

Innoteck WEEE Recycling Policy

Why Recycle?

In the UK, unwanted electrical items are one of the fastest-growing types of waste. Many of these items can be repaired or recycled, which helps conserve natural resources and protect the environment.

If electrical equipment is not recycled, it often ends up in landfill, where hazardous substances can leak and pollute the soil and water. This not only harms wildlife but can also impact human health.

To help remind you of the importance of recycling, electrical products are now marked with a crossed-out wheeled bin symbol. Items with this symbol should not be disposed of in your household waste bins.

What is WEEE?

The Waste Electrical and Electronic Equipment (WEEE) Directive aims to reduce the environmental impact of electrical goods by promoting their recycling and environmentally friendly processing. This directive requires the separate collection and responsible treatment of electrical waste.

How is Innoteck Helping?

As a responsible company, Innoteck is registered as a WEEE producer in the UK. We would like to provide information to help customers understand how to recycle their electrical and electronic devices for free at local recycling centres.

To find your nearest centre, simply visit <https://www.recyclenow.com/recycling-locator> and enter your postcode.

By working together, we can reduce waste and protect the environment for future generations.
