

2015 Auto Truck Key Blank Reference

The  to your success

TABLE OF CONTENTS

	Page
VIN Conversion	3
Manufacturer Index	3
Model Index.....	4-10
Auto Truck Reference	11-104
TKO/SDD Quick Reference.....	105-118
Cloning Quick Reference.....	119-133
Transponder On Board Programming Procedures	134-139
Transponder Keys.....	140-150
Glossary of Terms.....	151

HOW TO USE THE AUTO/TRUCK KEY BLANK REFERENCE

1. Two indexes are provided; the MANUFACTURER INDEX and the MODEL INDEX. Both indexes are in alphabetical order. The Manufacturer Index references brands like Toyota, Dodge and BMW. The model index lists models like the Camry (Toyota), Ram (Dodge) and 3 Series (BMW). Both indexes tell the user on what page the reference information will be found.
2. The body of the Reference explains Manufacturer, Model, Years, Lock Applications (i.e. ignition, door/truck, etc.) and Code Series. The Ilco/EZ number is the key number. A [P] indicates the key is available with a plastic head and a [PC] indicates the key is available in various plastic colors. The Transponder Information column provides pertinent information to producing the transponder key such as special equipment or which on board program (OBP) should be used. The Substitutes column provides other key blanks that should work in the application if the referenced key blank is not available and the Notes column contains information to assist you in cutting the key.

In the 2015 Ilco Auto/Truck Reference Guide is a column for Card No. In this column, users of our Futura, Ilco EZ®-Code, Ultracode, Tri Code H.S., Triax and Universal II code machine products will find the appropriate card number to use for each listed vehicle application.

- Where no card number is given, either a suitable card number does not exist, or the key in question cannot be cut on the above listed equipment.
- Where more than one card number is listed, more than one possible card exists; the correct card is dependent upon the key blank number required for the vehicle in question.
- In rare instances (the Kia section includes an example), in order to conform with code information as originally released by a manufacturer, the Ilco card number requires reverse order depth numbering; in other words, the smaller depth bit numbers are deeper cuts than

the larger depth bit numbers. On affected cards, if your source for biting information utilized conventional depth numbering (smallest depth number = shallowest cut), you will have to invert their depth numbers before using the listed card number. Ilco has no control over how others publish code information, and assumes no liability for keys miscut as a result.

3. TKO/SDD QUICK REFERENCE - A list of the vehicles/models known to incorporate transponder technology that require an SDD or TKO device.
4. CLONING QUICK REFERENCE - A list of the vehicles/models known to incorporate transponder technology that use an RW4 Plus / Ilco EZ®-Clone device.
5. TRANSPONDER ON-BOARD PROGRAMMING PROCEDURES - This section explains the on-board programming procedures for installing the GM, Ford, Mazda, Toyota, Lexus and Chrysler programmable transponder keys that are referenced in the Auto/Truck.
6. TRANSPONDER KEYS - Actual size drawings of all transponder keys
7. GLOSSARY OF TERMS - Current terms related to Transponder Technology and their definitions.

By learning to use this reference, you can reduce the confusion over which key blank to use in an automobile or truck. **Recognize that there will be exceptions to what is considered standard. Before cutting a replacement key, always compare the key blank to be cut with the original key.**

IMPORTANT: Before ordering key blanks for your key boards, reference the Notes Column to see if the key blank is a High Security Key and requires a special key machine. Be certain you have the key machine to cut the key before ordering the key blanks.

This book is provided as a service and is intended for reference only. Kaba Ilco Corp. disclaims liability for any damage or action resulting from the use of this information.

VIN CONVERSION (Vehicle Identification Number)

The VIN plate is located on the front of the dashboard on the drivers (LH) side of the vehicle, and is visible by looking into the vehicle through the windshield.

It is always important to verify the country of origin and the model year the vehicle was manufactured, and this is especially important when working on vehicles that require/could require transponder keys.

TYPICAL VIN

1	K	3	L	P	2	5	R	S	2	1	3	2	4	3	0	0
----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------

Volkswagen Pin Read is not 100% effective.				

* Keys MUST be coded using a RW2, RW3, or, RW4 or RW4 Plus. If using the RW2, it must have version 23 or higher. If keys are not coded, they cannot be added to a vehicle's central computer.

**If vehicles has existing key with R on blade, you must use MIT9-PT[R]. If vehicle has existing key with N on blade, you must use MIT13-PT[N]. If vehicle has lost all keys you can use the MIT13-PT[N].

TKO - will automatically By-Pass pin number. SDD - must have purchased Chrysler Can Pin By-Pass update in order to by-pass pin number. Otherwise pin number will be needed.

It has been observed on rare applications that use Philips Crypto2 (ID46) transponders that clone onto Ilco EH3LB or Silca MH electronic keys may not start the vehicle's engine. The intensity of the signal emitted by the ignition unit may vary. In such cases, manual calibration of the Ilco EH3LB or Silca MH electronic keys' sensitivity is performed to adapt to the individual situation. Manual calibration of EH3LB and MH keys can be performed only with SW versions 03.03.061 or higher of RW4 Plus, Ilco Ilco EZ@-Clone Plus, or Plus Box.

Refer to the latest manual for the specific cloning tool for detailed instructions on EH3LB and MH manual calibration.

* Requires RW4 Plus, Ilco EZ@-Clone Plus or Plus Box with SW version 03.03.061 or higher.
Indicates new non-battery key used for cloning. These keys require use of RW4 Plus, Ilco EZ Clone Plus, or Plus Box with SW version 03.09.066 or higher.

TRANSPONDER ON-BOARD PROGRAMMING PROCEDURES

**BUICK & CADILLAC****Originate New Master Key**

1. Insert new key into ignition cylinder and turn it to the ON (RUN) position. The security light on the dash will illuminate and stay on for ten minutes.
2. When the security light goes out, you have one minute to start the next step. Turn the ignition cylinder to OFF and then back to the ON (RUN) position. The security light on the dash will illuminate and stay on for ten more minutes.
3. When the security light goes out, you have one minute to start the next step. Turn the ignition cylinder to OFF and then back on the ON (RUN) position. The security light on the dash will illuminate and stay on for ten more minutes.
4. After the security light has gone off the third time, the key has been programmed into the vehicle's computer and will operate the car. It has replaced ALL the previous electronic key codes and is the ONLY key programmed into the vehicle's computer.

Add Duplicate Key

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) and back to OFF.
3. Remove the existing key and, within fifteen seconds, insert the new key and turn it to ON (RUN).
4. The security light will light up for two seconds to indicate success in programming the key into the vehicle.

If the Add Duplicate key instructions above did not work follow the variation below.

1. Insert already programmed key into ignition and START car.
2. Turn key off and remove key.
3. Insert key to be programmed and turn to ON within 15 seconds of removing the already programmed key.
4. The security light will go off once the key has been programmed.
5. Remove key and then test.

If the vehicle doesn't have a security light, leave the key in for 10 minutes and 30 seconds during step 4.

**1997 FORD, LINCOLN, MERCURY****1998 FORD, MERCURY****Originate New Master Key**

1. Insert new key into ignition cylinder and turn it to the ON (RUN) position. The security light on the dash will flash for fifteen minutes.
2. When the security light stops flashing, you have five minutes to start the next step. Turn the ignition cylinder OFF and then back to the ON (RUN) position. The security light on the dash will flash for fifteen more minutes.
3. When the security light stops flashing, you have five minutes to start the next step. Turn the ignition cylinder to OFF and then back to the ON (RUN) position. The security light on the dash will flash for fifteen more minutes.
4. After the security light stops flashing the third time, the new key has been programmed into the vehicles computer and will operate the car. It has replaced ALL the previous electronic key codes and is the ONLY key programmed into the vehicle's computer.

Add Duplicate key

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) and back to OFF.
3. Remove the existing key and, within fifteen seconds, insert the new key and turn it to ON (RUN).
4. The security light will light up for two seconds to indicate success in programming the key into the vehicle.

**1998+ FORD, LINCOLN, MERCURY****1999+ FORD, MERCURY****Originate New Master Key**

1. This requires that the vehicle be connected to special diagnostic equipment (TKO/SDD). Two new Keys should be ready because the system requires a minimum of two Keys in the program. After the first two Keys are programmed, additional Keys can be entered individually by following the instructions for adding duplicate Keys.

Add Duplicate Key (Requires two working Keys)

1. Insert an existing Key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) and back to OFF.
3. Remove the existing Key and, within five seconds, insert a second Key and turn it to ON (RUN) then back OFF.
4. Insert the new Key before ten seconds have elapsed and turn it to ON (RUN). Leave it on for one second and turn back to OFF.
5. The security light will light up for three seconds to indicate that the new Key has been successfully programmed.

1998 MAZDA 626

The on-board programming procedures for the Mazda 626 should be used only if the preferred methods are unavailable. The Mazda dealers use a New Generation Star Tester to originate and add new duplicate keys to this model vehicle.

The ILCO RW2 or RW2, RW3, RW4/EZ-Clone should be used for these purposes by Ilco dealers. The following procedures will require pre-programmed keys. Ilco transponder keys for Mazda are not available pre-programmed

Originate New Master Key or Add Duplicate Key

1. Insert new key into ignition cylinder and turn it to the ON (RUN) position. Turn back to the LOCK position. Repeat until this has been done five times. Do not let the lock sit for more than one second in any position during this step.
2. Turn the key back to the ON (RUN) position. The dash mounted security light should be flashing rapidly. Within twenty seconds turn to the LOCK position and leave it there for five minutes. After this five minute delay, the security light should slow to a much slower rate.
3. Within twenty seconds, enter the code password.
4. The code password is obtained by supplying the vehicle's Immobilizer Unit serial number to Mazda. It is an eight digit number unique to each Immobilizer Unit.
5. While carefully watching the dash mounted security light, turn the ignition to the ON (RUN) position. Count the number of flashes by the security light and turn back to LOCK when the number of flashes equals the first digit of the password.

6. Within thirty seconds, turn the ignition lock back to ON (RUN) and count until the number of flashes matches the value of the second digit of the password. Turn the ignition lock back to LOCK.
7. Repeat until all eight password digits have been entered. Use caution and turn the lock from one position to the other only when the security light is NOT illuminated. If a mistake is made or the count of flashes is lost, wait forty-five seconds and start over.
8. When the security light stops flashing and stays illuminated, the password has been entered correctly.
9. Start the vehicle and the security light should go off within two seconds.
10. Additional new keys may be added by inserting them and starting the car within twenty seconds of removing the previous key.
11. Thirty seconds after the last key has been removed, the vehicle will end the program mode and return to normal operating mode.

1998+ TOYOTA, LEXUS

The Toyota Electronic Control Module does not have programming modes without a pre-programmed key. If there is no key available that is already programmed into the module, the module must be replaced.

To delete all but one key from the unit

1. Simultaneously depress and release brake and accelerator pedals 1 time.
2. Insert an existing master key into the ignition cylinder. Do not turn the key from the OFF (LOCK) position.
3. Within fifteen seconds of inserting the key, depress and release the accelerator pedal six times.
4. Within twenty seconds of completing the above step, depress and release the brake pedal seven times.
5. The security light will flash, indicating all keys other than the one being used have been deleted.
6. Remove the key from the ignition cylinder within ten seconds. It will be the only key still programmed to work.

Add Duplicate Key

1. Simultaneously depress and release brake and accelerator pedals 1 time.
2. Insert existing master key into ignition.
3. Within 15 seconds depress and release accelerator pedal 5 times.
4. Within 20 seconds depress and release the brake pedal 6 times and remove key.
5. Within 10 seconds insert new key into ignition.
6. Within 10 seconds depress and release the accelerator pedal 1 time.
7. After 80 seconds new key is registered and security light goes off.
8. Remove new key and depress and release brake pedal 1 time.

1998+ CHRYSLER, DODGE 1999+ CHRYSLER, JEEP

Originate New Master Key

1. This requires the vehicle to be connected to special dealer diagnostic equipment.

Add Duplicate Key - Must have two programmed Sentry Keys

1. Insert one of the two valid keys into the ignition lock and turn to the ON (RUN) position.
2. After the key has been in the ON position for at least five seconds, but no more than 15 seconds turn the lock back to OFF.
3. Remove the key and insert the second valid key and turn to the ON position within 15 seconds. (The second key must not be the same as the first key.)

4. A theft alarm light should illuminate after ten seconds and a single chime sound will indicate entry into the Customer Programming Mode.
5. Turn the key to the OFF position within 60 seconds and remove the valid key.
6. Insert a new key and turn to the ON position.
7. After approximately ten seconds, a single chime will sound and the theft alarm light will stop. Wait five seconds and turn to the OFF position.
8. The above steps must be repeated for additional keys.

2001+ GM EXPORT VEHICLES EQUIPPED WITH THE PKIII+ SYSTEM. EXPORT VEHICLES ARE EASILY IDENTIFIED BY A 2 OR 3 DIGIT IN THE FIRST POSITION OF THE VIN NUMBER.

Originate New Master Key

Master Keys must be used.

1. Make proper cuts onto a GM Master key.
2. Insert the new working key into the ignition cylinder and turn it to the ON position. The THEFT light will light up and stay on for about 10 minutes.
3. When the light goes out, repeat the same procedure as in step #2, two more times.
4. When the THEFT light goes out, the new key has been programmed.

To program the second key.

1. Within 20 seconds of completing the last step for the first key, insert a second Master key and turn to the ON position. When the light goes out, the new key is programmed.
2. Repeat the previous step for programming up to 12 additional keys.

Add Duplicate Key - Must have two programmed Sentry Keys

1. Insert the first working key into the ignition cylinder.
2. Turn the ignition cylinder to the ON position.
3. When the SECURITY light goes out, remove the key.
4. Insert the second working key and turn the ignition cylinder ON.
5. When the SECURITY light goes out, remove the key.
6. Insert the new duplicate key and turn the ignition cylinder ON.
7. When the SECURITY light goes out, key has been programmed.

Note: For Pontiac Grand Prix 2004-2007, it may be necessary to disconnect the battery for 10 minutes, and then continue with the 3 x 10.45 On Board Procedure

2001+ FORD FOCUS, FORD ESCAPE 2001+ MAZDA TRIBUTE ONLY

Originate New Master Key

1. This requires that the vehicle be connected to special diagnostic equipment (TKO/SDD). There are two ten minute delays involved while this device erases all existing key programming and sets up the vehicle computer to accept new key codes. Two new keys should be ready because the system requires a minimum of two keys in the program. After the first two keys are programmed, additional keys can be entered individually by following the instructions for adding duplicate keys.

Add Duplicate Key (Requires two working keys)

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) and back to OFF.
3. Remove the existing key and, within five seconds, insert a second key and turn it to ON (RUN) then back OFF.
4. Insert the new key before ten seconds have elapsed and turn it to ON (RUN). Leave it on for one second and turn back to OFF.
5. The security light will light up for three seconds to indicate that the new key has been successfully programmed.
6. Once the key has been successfully programmed, do not remove the key from the ignition cylinder. The key must be left in the cylinder for approximately 10 minutes before the programming procedure is complete. Should someone attempt to start the vehicle or remove the key from the ignition cylinder prior to the 10 minutes elapsing, the keys will not function correctly and the programming procedure will have to be carried out again.

2002+ TOYOTA, LEXUS

The Toyota Electronic Control Module does not have programming modes without a pre-programmed key. If there is no key available that is already programmed into the module, the module must be replaced.

To delete all but one key from the unit

1. Simultaneously depress and release brake and accelerator pedals 1 time.
2. Insert an existing master key into the ignition cylinder. Do not turn the key from the OFF (LOCK) position.
3. Within fifteen seconds of inserting the key, depress and release the accelerator pedal six times.
4. Within twenty seconds of completing the above step, depress and release the brake pedal seven times.
5. The security light will flash, indicating all keys other than the one being used have been deleted.
6. Remove the key from the ignition cylinder within ten seconds. It will be the only key still programmed to work.

Add Duplicate Key

Requires one working Toyota/Lexus Master Key.

1. Make sure all doors and windows are closed.
2. Insert Master key into the ignition cylinder.
3. Cycle the ignition cylinder from On to OFF five times.
4. Open and close the driver side door 6 times.
5. Remove the Master key and insert the new duplicates key.
6. TURN THE IGNITION CYLINDER ON.
7. The new key will be registered after 60 seconds. The THEFT light on the dashboard will go out, indicating that programming has been completed.

FORD/LINCOLN/MERCURY IKT

Add Duplicate Key (Requires two working keys)

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) for at least 3 seconds, but no more than 10 seconds, and then back to OFF.
3. Remove the existing key, and within 10 seconds insert a second key, turning it ON (RUN) for at least 3 seconds, but no more than 10 seconds and then back to OFF.
4. Remove the second key, and within 20 seconds, insert the new, un-programmed key into the ignition cylinder.

5. Turn the new key to ON (RUN) for at least 6 seconds and then turn back to OFF.
6. The security light will illuminate for up to 3 seconds to indicate that the new key has been successfully programmed. A flashing security light will indicate unsuccessful programming.
7. If the key has been successfully programmed, it will start the vehicle's engines as well as operate the remote entry system.

2011 FORD FIESTA

Add Duplicate Key (Requires two working keys)

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) for approximately 3 seconds and then back to OFF.
3. Remove the existing key, and within 10 seconds insert a second key, turning it ON (RUN) for approximately 3 seconds, and then back to OFF.
4. Remove the second key, and within 10 seconds, insert the new, un-programmed key into the ignition cylinder.
5. Turn the new key ON (RUN) for approximately 3 seconds and then back to OFF.
6. Repeat steps 1-5 for each additional key. A total of 8 keys can be programmed.

Programming Remote Keyless Entry (RKE)

1. Unlock the door locks, using the door lock control switch.
2. Within 6 seconds, turn the ignition cylinder from OFF to On (RUN) 4 times, with the fourth time ending in OFF.
3. Within 10 seconds, press any button on the RKE to be programmed.
4. Press any button on each of the subsequent RKE's to be programmed. A total of 8 RKE's can be programmed.
5. Exiting the programming mode can be accomplished by turning the ignition cylinder to the ON (RUN) position, waiting 10 seconds after the final RKE has been programmed, or by reaching the maximum 8 RKE's that can be programmed.

2010-2011 FORD TRANSIT CONNECT

Add Duplicate Key (Requires two working keys)

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) for approximately 3 seconds and then back to OFF.
3. Remove the existing key, and within 10 seconds insert a second key, turning it ON (RUN) for approximately 3 seconds, and then back to OFF.
4. Remove the second key, and within 10 seconds, insert the new, un-programmed key into the ignition cylinder.
5. Turn the new key ON (RUN) for approximately 3 seconds and then back to OFF.
6. Repeat steps 1-5 for each additional key. A total of 8 keys can be programmed.

Programming Remote Keyless Entry (RKE)

1. The front doors must be closed and unlocked before proceeding.
2. Within 6 seconds, turn the ignition cylinder from OFF to On (RUN) 4 times, with the fourth time ending in OFF. If the module successfully enters programming mode you will hear a chime.
3. Within 10 seconds, press any button on the RKE to be programmed. You will hear a chime to indicate successful programming. Repeat this step for each RKE to be programmed. A total of 4 RKE's can be programmed.
4. Exiting the programming mode can be accomplished by turning the ignition cylinder to the ON (RUN) position, waiting 10 seconds after the final RKE has been programmed, or by reaching the maximum 8 RKE's that can be programmed.

GM HIGH SECURITY KEY (NORTH AMERICA, EXCEPT CANADA)

Add Duplicate Key

1. Insert an existing master key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) and back to OFF.
3. Remove the existing key, and within 10 seconds insert the new key and turn it to ON (RUN).
4. The new key has now been programmed.

GM HIGH SECURITY KEY-PEPS

Add New Transmitter (Requires one working transmitter)

1. Insert an existing transmitter into the cupholder.
2. Insert the key of the new transmitter into the driver's side door lock, turning the key to the unlock position 5 times within 10 seconds. The Driver Information Center will now display, Ready For Remote #2, 3, 4, or 5.
3. Insert the new transmitter into the transmitter pocket. The transmitter pocket is located inside the center console under the cupholder. Remove the cupholder to access the transmitter pocket.
4. Press the ignition button. Once the new transmitter has been programmed, the Driver Information Center will display that it is ready to program the next transmitter.
5. Remove the new transmitter from the transmitter pocket and press the Unlock button on the transmitter.
6. Repeat steps 3-5 to program additional transmitters. Press and hold the ignition button for 5 seconds to exit the programming mode.

Originate New Transmitter (No working transmitter exists)

1. Insert the key of the new transmitter into the driver's side door lock, turning the key to the unlock position 5 times within 10 seconds. The Driver Information Center will now display, Remote Learn Pending, Please Wait.

2. Wait ten minutes until the Driver Information Center displays, Press Engine Start Button to Learn and press the ignition button. The Driver Information Center will again display, Remote Learn Pending, Please Wait.
3. Repeat Step 2 two additional times. After the third time, all existing transmitters for the vehicle will no longer work the vehicle. Any remaining transmitters can be re-learned. The Driver Information Center will now display, Ready For Remote #1.
4. Insert the new transmitter into the transmitter pocket. The transmitter pocket is located inside the center console under the cupholder. Remove the cupholder to access the transmitter pocket.
5. Press the ignition button. Once the new transmitter has been programmed, the Driver Information Center will display that it is ready to program the next transmitter.
6. Remove the new transmitter from the transmitter pocket and press the Unlock button on the transmitter.
7. Repeat steps 4-6 to program additional transmitters. Press and hold the ignition button for 5 seconds to exit the programming mode.

2012 FORD ESCAPE/FOCUS

Add Duplicate Key (Requires two working keys)

1. Insert an existing key into the ignition cylinder.
2. Turn the ignition cylinder to ON (RUN) for at least 3 seconds, but no more than 10 seconds, and then back to OFF.
3. Remove the existing key, and within 10 seconds insert a second existing key, turning it ON (RUN) for at least 3 seconds, but no more than 10 seconds and then back to OFF.
4. Remove the second key, and within 10 seconds, insert the new, un-programmed key into

the ignition cylinder.

5. Turn the new key to ON (RUN) for at least 6 seconds and then turn back to OFF.
6. The security light will illuminate for up to 3 seconds to indicate that the new key has been successfully programmed. A flashing security light will indicate unsuccessful programming.
7. If the key has been successfully programmed, it will start the vehicle's engines as well as operate the remote entry system.
8. To program additional new keys, wait at least 20 seconds and then repeat steps 1-7.

2010-2012 FORD EDGE/EXPLORER/TAURUS 2010-2012 LINCOLN MKS/MKT

Add Duplicate Key (Requires two working Intelligent Access keys)

1. Place the new Intelligent Access key in the pocket inside the center console.
2. Press the power door UNLOCK control 3 times.
3. Depress and release the brake pedal 1 time.
4. Press the power door LOCK control 3 times.
5. Depress and release the brake pedal 1 time. The indicator on the Start/Stop button should start to flash rapidly, indicating the vehicle is in programming mode and has detected 2 programmed Intelligent Access keys in the vehicle.

6. Within 1 minute, press the Start/Stop button. If successful, a message will appear on the message center indicating the new Intelligent Access key has been programmed.

Note: A maximum of 4 Intelligent Access keys can be programmed into the vehicle. If 4 Intelligent Access keys have already been programmed, the message center will indicate, "MAX # of keys learned."

7. Remove the Intelligent Access key from the center console and press the lock or unlock control on the new Intelligent Access key to exit programming mode.

Cloning Compatible Key Blanks

The following keys can be duplicated using a cloning tool. For more detailed vehicle information see the application chart on pages 135-149.

TRANSPONDER RELATED GLOSSARY TERMS

SYSTEMS

Immobilizer System: System used in disarming vehicles when an improper or non-transponder key is used. The first component disarmed in most systems is the Fuel Pump.

PATS: Passive Anti-Theft System (Ford).

Securilock™: Name for Ford PATS System.

PASS Key® III: Personalized Automotive Security System (Registered Trademark - GM).

PASS Key® III+: Current generation (2004-05) of the PASS Key® III.

Passive: Requires that the user do nothing to Arm or Disarm. The system is automatic.

Fixed Code: The code required to start the vehicle does not change.

Rolling Code: This system is more complex. Each time the ignition is turned on, the engine has started and the transponder code is checked by the vehicle computer memory, a new code is written to the transponder. This new code is required for the car to start the next time.

Challenge Response Code (Encrypted): This system is the most complex of those currently in use. Communication between the key and the ECM is encrypted in both directions (bi-directional encryption of data) and the code changes during every use. In most cases, Ilco offers a solution to this system.

SYSTEM COMPONENTS

Transponder: Radio Frequency (RF) Transmitter Responder reacting to an electrical impulse of a reader constituted by a surrounding antenna.

Electronic Control Module (ECM): The ECM, or on-board computer, in a vehicle with an immobilizer system has special software designed to work with the immobilizer. The immobilizer can communicate only with an ECM, which it recognizes.

Control Module: The control module communicates with the transponder in the ignition key via the antenna ring, as well as with the ECM. The control module sends a carrier frequency via the antenna ring. The frequency can be changed to the best possible frequency if needed. A fixed number of codes are contained in the memory and the Control module verifies that the correct code is being sent.

Antenna: The antenna has two functions. It transmits the carrier frequency from the control module to the transponder and transmits a coded identification signal from the transponder to the control module.

TRANSPONDER CHIPS

Read-Only/Fixed Code: This type of chip is used on most original transponder keys. The code can be read, but it cannot be written over.

Read-Write/Fixed Code: This type of chip is used on Ilco after market keys. The transponder code can be read and programmed over.

PT: This key suffix refers to Ilco replacement keys containing pre-programmed chips.

T1: This key suffix refers to a first generation pre-programmed Philips® read/write chip used mainly in Europe.

T2: This key suffix refers to a second generation pre-programmed Philips® read/write chip and is used on some Ilco replacement keys.

T3: This key suffix refers to a glass Texas Instruments® pre-programmed read only chip.

T4: This key suffix refers to a plastic wedge Texas Instruments® pre-programmed read only chip.

T5: This key suffix refers to a blank or neutral transponder contained in the key head. This is a read-write chip used in most Ilco replacement keys that are used in conjunction with the RW2 or RW2, RW3, RW4/Ilco EZ®-Clone.

T6: This key suffix refers to a blank with a Megamos® encrypted read only chip.

T14: This key suffix refers to a plastic wedge Philips® CAN encrypted (ID46) pre-programmed read only chip.

T24: This key suffix refers to a glass Megamos® CAN encrypted pre-programmed read only chip.

Texas Instruments® (TI): This chip manufacturer produces both plastic wedge and glass transponder chips. Chips are read-only. Texas Instruments® chips for Chrysler and Lincoln LS are encrypted (Challenge Response).

Megamos®: This chip manufacturer produces both plastic wedge and glass transponder chips. The original chips are read only and used on manufacturers including Honda, Cadillac, Porsche, and Jaguar. Ilco uses a T5 to emulate this chip.

Philips®: This chip manufacturer produces read-only and read-write original chips. Ilco uses a T2 or T5 to emulate original Philips®. Primary applications of this chip in the USA are Cadillac Catera, BMW, Infiniti, Mazda, Nissan, Mercedes and Volvo.

Motorola™: This read only chip is only used on one model, the Lincoln Mark VIII, and Ilco does not produce a replacement key for this car.

Temic™: This read only chip is mainly found in European applications.

ELECTRONIC KEY SYSTEMS

EB3: This prefix refers to a key blade with a molded plastic "U-shaped" bow that is used with an electronic head to complete an electronic key assembly.

EH: This prefix refers to an electronic head that contains a battery powered circuit board and is the latest version electronic head used for cloning transponder systems that utilize Philips® (ID46) encrypted transponders.

EH3: This prefix refers to an electronic head that contains a battery powered circuit board used for cloning transponder systems that utilize Texas Instruments® encrypted transponders.

EH3LB: This prefix refers to an electronic head requiring no battery used for cloning transponder systems that utilize both Texas Instruments® and Philips® encrypted.

EH3P: This prefix refers to an electronic head that contains a battery powered circuit board used for cloning transponder systems that utilize Philips® (ID46) encrypted transponders.

EK3: This prefix refers to a full electronic key assembly that includes an electronic head (EH3) and blade (EB3). It applies to vehicles that use Texas Instruments® encrypted transponders.

EK3P: This prefix refers to a full electronic key assembly that includes an electronic head (EH3P) and blade (EB3). It applies to vehicles that use Philips® (ID46) encrypted transponders.

EK3LB: This prefix refers to a full electronic key assembly that includes an electronic head (EH3LB) and blade (EB3).

GTH: This prefix refers to a modular head that contains a transponder used for cloning transponder systems that utilize both Texas Instruments® and Philips® encrypted.

GTK: This prefix refers to a full modular key assembly that includes a head (GTH) and blade (EB3). It is the latest cloning technology and applies to vehicles that use both Texas Instruments® and Philips® transponders.

ILCO SERVICING TOOLS

TD3AI: Transponder Detector that identifies the presence of a transponder in an automotive key.

Ilco EZ®-Clone: Cloning device for automotive transponder keys. It is a stand-alone computer with simple 2 button operation that allows cloning of Fixed Code Transponders and Texas Instruments® encrypted transponders.

RW4 Plus: Cloning device for automotive transponder keys. It is a stand-alone computer that allows cloning of Fixed Code Transponders, Texas Instruments® encrypted transponders and Philips® (ID46) encrypted transponders. Also identifies the presence of a transponder, transponder type, ID and manufacturer. Can generate random codes and archive customer date for future use.

Ilco EZ®-Clone Plus: Cloning device for automotive transponder keys. It is a stand-alone computer that allows cloning of Fixed Code Transponders, Texas Instruments® encrypted transponders and Philips® (ID46) encrypted transponders.

Plus Box: Hardware unit that attaches to RW4 or Ilco EZ®-Clone to add the capability to clone Philips® (ID46) encrypted transponders.

Snoop: Device use the RW4 Plus, Ilco EZ®-Clone Plus, RW4 with Plus Box or Ilco EZ®-Clone with Plus Box that captures communication between the vehicle and the key when cloning Philips® (ID46) encrypted transponders.

TKO: Programming Tool for servicing vehicles when all keys have been lost, cannot be cloned or the manufacturer doesn't allow programming keys through On-Board Programming. Comes loaded will all software released by Ilco through specified date. Fully upgradeable for future software released by Ilco.

TKO Select: Programming Tool for servicing vehicles when all keys have been lost, cannot be cloned or the manufacturer doesn't allow programming keys through On-Board Programming. This version comes pre-loaded with 15 pieces of very common software and is designed to be customized, by the customer, with further Ilco software to meet specific market demands.

TCP (T-Code Pro): Programming Tool for servicing vehicles when all keys have been lost, cannot be cloned or the manufacturer doesn't allow programming keys through On-Board Programming. Comes loaded will all software released by Ilco through specified date. Fully upgradeable for future software released by Ilco.

MVPP (MVP Pro): Programming Tool for servicing vehicles when all keys have been lost, cannot be cloned or the manufacturer doesn't allow programming keys through On-Board Programming. Comes loaded will all software released by Ilco through specified date. Fully upgradeable for future software released by Ilco. This is a "Pay Per Use" tool.

Additional Automotive Products From Kaba Ilico Corp ...

- FUTURA – Two Cutters - Two Clamps - One Machine**
Innovation at the touch of a Screen:
- 10" touch screen tablet with step-by-step instructions
 - Wi-Fi connectivity (no cumbersome cords or cables)
 - Updates available via the internet or Wi-Fi!

- TKO / TKO Select Transponder Key Originator**
T-Code Pro (TCP) and MVP Pro (MPPP)
- Program and originate transponder keys
 - Delete lost or stolen keys
 - Read and reset vehicle immobilizer (anti-theft) error codes
 - Determine the number of keys programmed to the vehicle

- RW4 Plus and Ilico EZ®-Clone Plus**
- The #1 multifunction tools, to detect, read and clone automotive transponder keys and the new electronic cloneable keys, both T. 1. Fixed and Encrypted
 - Cloning units read the electronic code of automotive keys and duplicates that code into the matching key blank
 - Can generate a secure and unique code that can be copied to a key blank
 - Software updates can be easily downloaded to the unit using the USB port
