

STRAWFISH®

It's What's On The Inside That Counts!

StrawFish® is shifting the culture of sustainable sourcing with honest solutions to single-use plastic.

By utilizing marine waste instead of 'plant-based' feedstocks (typically corn, canola, agave), StrawFish® products **reduce environmental stresses from industrial farming** practices.

This technology **reduces toxic marine waste** (oyster shells) that is polluting coastal communities around the world, turning **marine pollution into single-use solutions**.

By **proactively reducing net-plastic pollution**, StrawFish® products are **sourced through circularity™** while being an **FDA Approved** allergen-free solution for all!
