“ [We] are very impressed with the quality of the straws...it is so refreshing to see a company that is doing a great job saving the Earth.

Royal Caribbean

“ [I] have been working with StrawFish and I cannot say enough positives about our interactions. I can speak for the Gordon Food Service team when I say we are looking forward to continuing to work with StrawFish.

Gordon Food Services

“ Oceanic Global is proud to add StrawFish to the Blue List, our global network of solution providers offering sustainable alternatives to environmentally detrimental products and services. StrawFish is pioneering sustainable best practices in their sector.

Oceanic Global

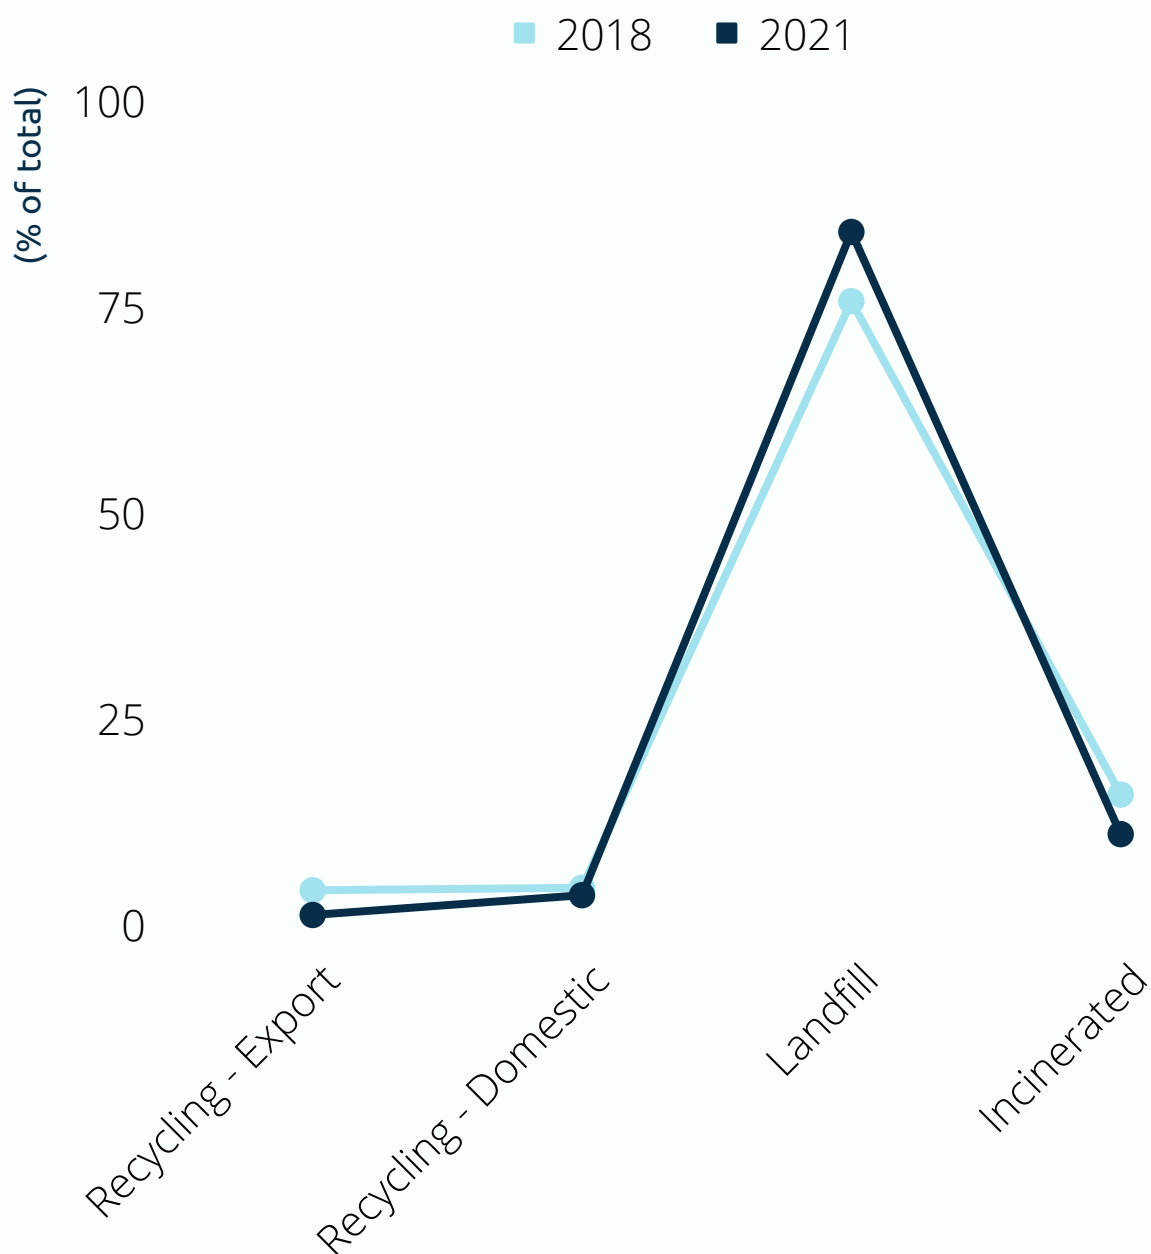

“

**Industrial pollution
and the discarding of
plastic waste must be
tackled for the
sake of all life in the
ocean.**

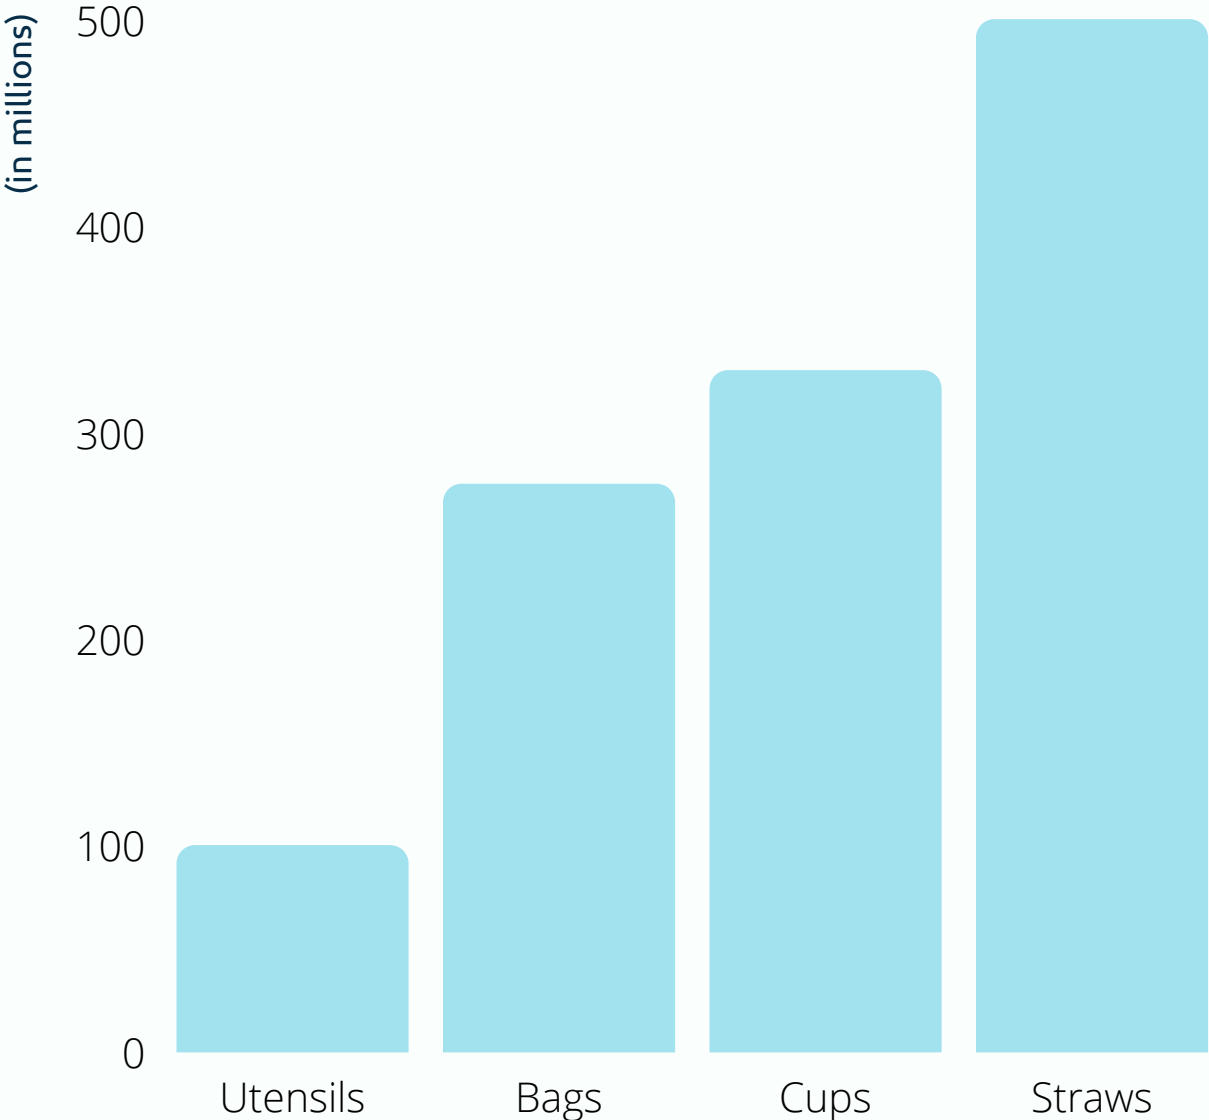

David Attenborough

Over 75% of plastic waste enters landfills yearly.

Less than 5% is recycled in the US...

The number of single-use plastics used in the United States daily is staggering.

27+
STATES

127+
COUNTRIES

All StrawFish® disposables are...

Certified to ASTM D 5526 to 100%
biodegrade in natural landfill
conditions within 27 weeks; without
the need for oxygen (anaerobically),
extremely high temperatures, or
biological additives.

ASTM INTERNATIONAL

Making it easier than ever for businesses and consumers to champion sustainability.

Throw it away!

Once you're done using StrawFish's single-use products, dispose of them in a traditional waste bin and the break down process will begin at the landfill.

Bring in the microbes!

When exposed to the "elements", the products are engineered to attract the billions of naturally existing micro-organisms that will literally eat away at the material.

6 months later...

Under ASTM D 5526, these products will be completely digested, with only natural gas and humus as by-products, leaving no toxic residue or micro-plastics.

“

**To inspire a global
community on ways
to become
champions of
sustainability in
everyday life.**
