

HydraBarrier

HydraBarrier® Titan Instructions

Warning

HydraBarrier Titans are heavy even when empty. Always use caution when handling and filling.

Preparation and Placement

1. Remove the Titan from its packaging.
2. Place Titan in front of the area you would like to protect but make sure area is free of sharp or pointy objects. Also, make sure that the fill spouts are located on the top of the barrier.

Tip: Take time to carefully place the barrier in the desired position. Once the barrier begins to fill it will quickly become heavy and difficult to move.

Filling

There are two fillers that are available for the Titan.

Black Filler Cap

1. For HydraBarriers Titans with black filler cap, simply unscrew to open.

2. Close when full.

Large Opening Filler

Some HydraBarrier Titans have a large filler tube. This will allow a large diameter hose (up to 4") to be used for filling.

1. To use, simply unroll the large filler tube and insert hose into the opening.

2. You can clamp the tube for easier filling

3. Once filling is complete roll up top and use the attached tie to secure filler tube, ensuring that it is closed.
