- 100% waterproof
- Clear tarp – lets in light, not water
- 30-Day Money Back Guarantee

BONUS RESOURCES

- Easy install tips
- Liquid Learning how-to video links.

*FLIP OVER

HYDRATARP® - PREMIUM CLEAR TARP

When the elements threaten, HydraTarp provides coverage for areas needing protecting and containment from rain and wind. *We have you covered!*

USING YOUR NEW HYDRATARP

Follow these three easy to remember guidelines during setup:

1. **Secure your tarp** so it's not at the mercy of the elements like the wind.
2. **Don't overstress the grommets**; use bungee cords or tarp clips to provide a firm tie down while also provide enough give so the grommets don't break or become loose.
3. **Keep it flexible** and make sure your tarp isn't being pulled so tight over pointy, sharp or jagged objects that it tears or rips.

Extend the longevity of your tarp by remembering to:

- **Check your tarp every few months** for areas of wear and adjust appropriately. Simply adjusting your tarp by 6" can help distribute wear and tear—from water pooling to sun exposure and the like—and maximize protection and life span.
- **If a rip or tear appears**, reinforce the area with duct tape or similar products to keep the impacted section from further compromise.

Be cautious when using tarps to cover material in a moving vehicle:

- Use a mesh or canvas tarp that is breathable.
- Polyethylene tarps are not breathable and can have a parachute effect. When used in this capacity it is very important that tarps are securely tied down. We suggest tie downs over the tarp, not just from the grommets out.
