

TUBULAR Adapter Arms

All ETC Supplies plastic tubular hoops are adapted to fit your embroidery machine by attaching adapter brackets, designed specifically for your machine make, model and sewing field size.

ETCSupplies manufactures adapters to fit most major embroidery machine types and sizes, and designs new adapter arms as new machines come on the market.

Tubular Adapter Arms are the way that ETC Supplies Products interface with the hoop support arms already on your machine. The hoop support arms for all machine types, (Tajima, Brother, Barudan, Melco, Toyota etc) are all a little different, and require unique adapter arms that will fit and hold the hoop securely. In addition to the arm styles, there are also different sewing field widths unique to each machine manufacturer, (360 - 380 - 495 - 520 etc) so the arms not only come in styles but also lengths.

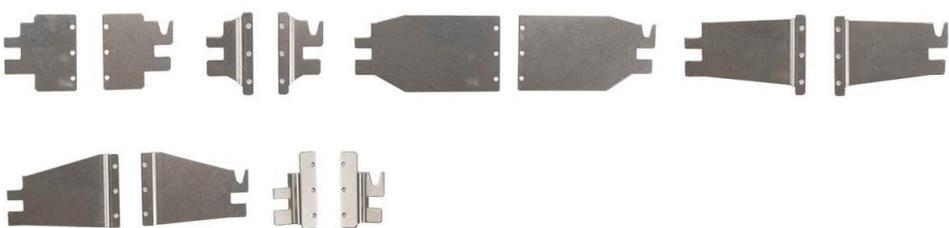

The Tubular Adapter Arms easily attach to the plastic hoops, ICTCS Clamps and Quick Change, with Phillips head screws. The adapter arms are all made of stainless steel for years of trouble free service.
