

Renee's Garden

Your Garden To Table Seed Company

Enrich Your Soil With Cover Crops!

Protect and nourish your soil! In the winter, wind, rain and frost can erode and leach valuable nutrients from bare garden beds. Planting either of our fast-growing cover crops in the fall will naturally increase fertility, protect bare soil from the elements and control weeds.

Scatter Garden Cover Crop Mix is a blend of legumes, grasses, roots, and rapeseed. It enriches your soil by fixing nitrogen, enhancing soil structure, preventing erosion, and retaining valuable nutrients, all while boosting organic matter for improved soil quality.

Kodiak Mustard Bonus Pack is a soil building "green manure" cover crop. Sown after your spring, summer and early fall crops are finished, it will protect and restore your garden soil for future plantings.

Planting Cover Crop Seeds

Lindsay explains growing cover crop, and demonstrates how to sow our mix in a raised garden bed for best results!

OUR FAVORITE WEEDER

The sharp, laminated carbon steel blade easily scrapes weeds right out of the ground. The pointed edge blade is good for digging and making uniform straight furrows to directly sow seed. **Get Yours**
