

Power Rake / De-Thatcher

1. Thatch is a dense mat of roots, stems, and grass clippings that accumulates between the soil and the growing blades of grass.
2. Combing/Dethatching with flail blades will effectively remove thatch buildup.
3. With thatch removed, air, water, nutrients, herbicides, and pesticides can do their job. Turf becomes healthier and more resistant to insect damage and disease.
4. Dethatching at regular intervals promotes denser growth and ensures you'll have a vibrant lawn.

Proper power raking used with an over-all lawn care program can help restore old lawns and keep good lawns healthy.

Power Raking provides effective removal of dead grass and thatch from around grass roots, to allow better moisture and fertilizer absorption, plus helps control fungus, snow mold, moss growth, and worm bumps.
