

**Tired of those annoying bare spots in your lawn?
Do you ever think your lawn should be thicker?
Rent an overseeder today, and improve your
lawn for tomorrow!!**

Lawns suffering from thin, bare patches or those without any grass at all require aggressive renovation techniques. The lawn can be revived by using a BlueBird lawn seeder. The hopper drops a measured amount of seed into the soil prepared by the action of the rotating knife blades. As the seeder moves forward, the neoprene flap smooths the soil to cover the seed and aids germination. Water thoroughly as soon as overseeding is complete and lightly each day until the seed germinates. Once the grass has sprouted, water regularly to encourage deeper root growth.

For best results, we recommend overseeding in two applications, with the second application made at a 45-degree angle to the first. You'll notice a distinct cross hatch pattern in the effected soil as the BlueBird delta reel cuts precisely aligned rows allowing for more seed to penetrate into the topsoil.
